

# DB Week 2

# Workshop

INFO20003 | Sandy Luo

# Workshop Overview

**01**

## **Database Development Lifecycle**

What are the stages?

**02**

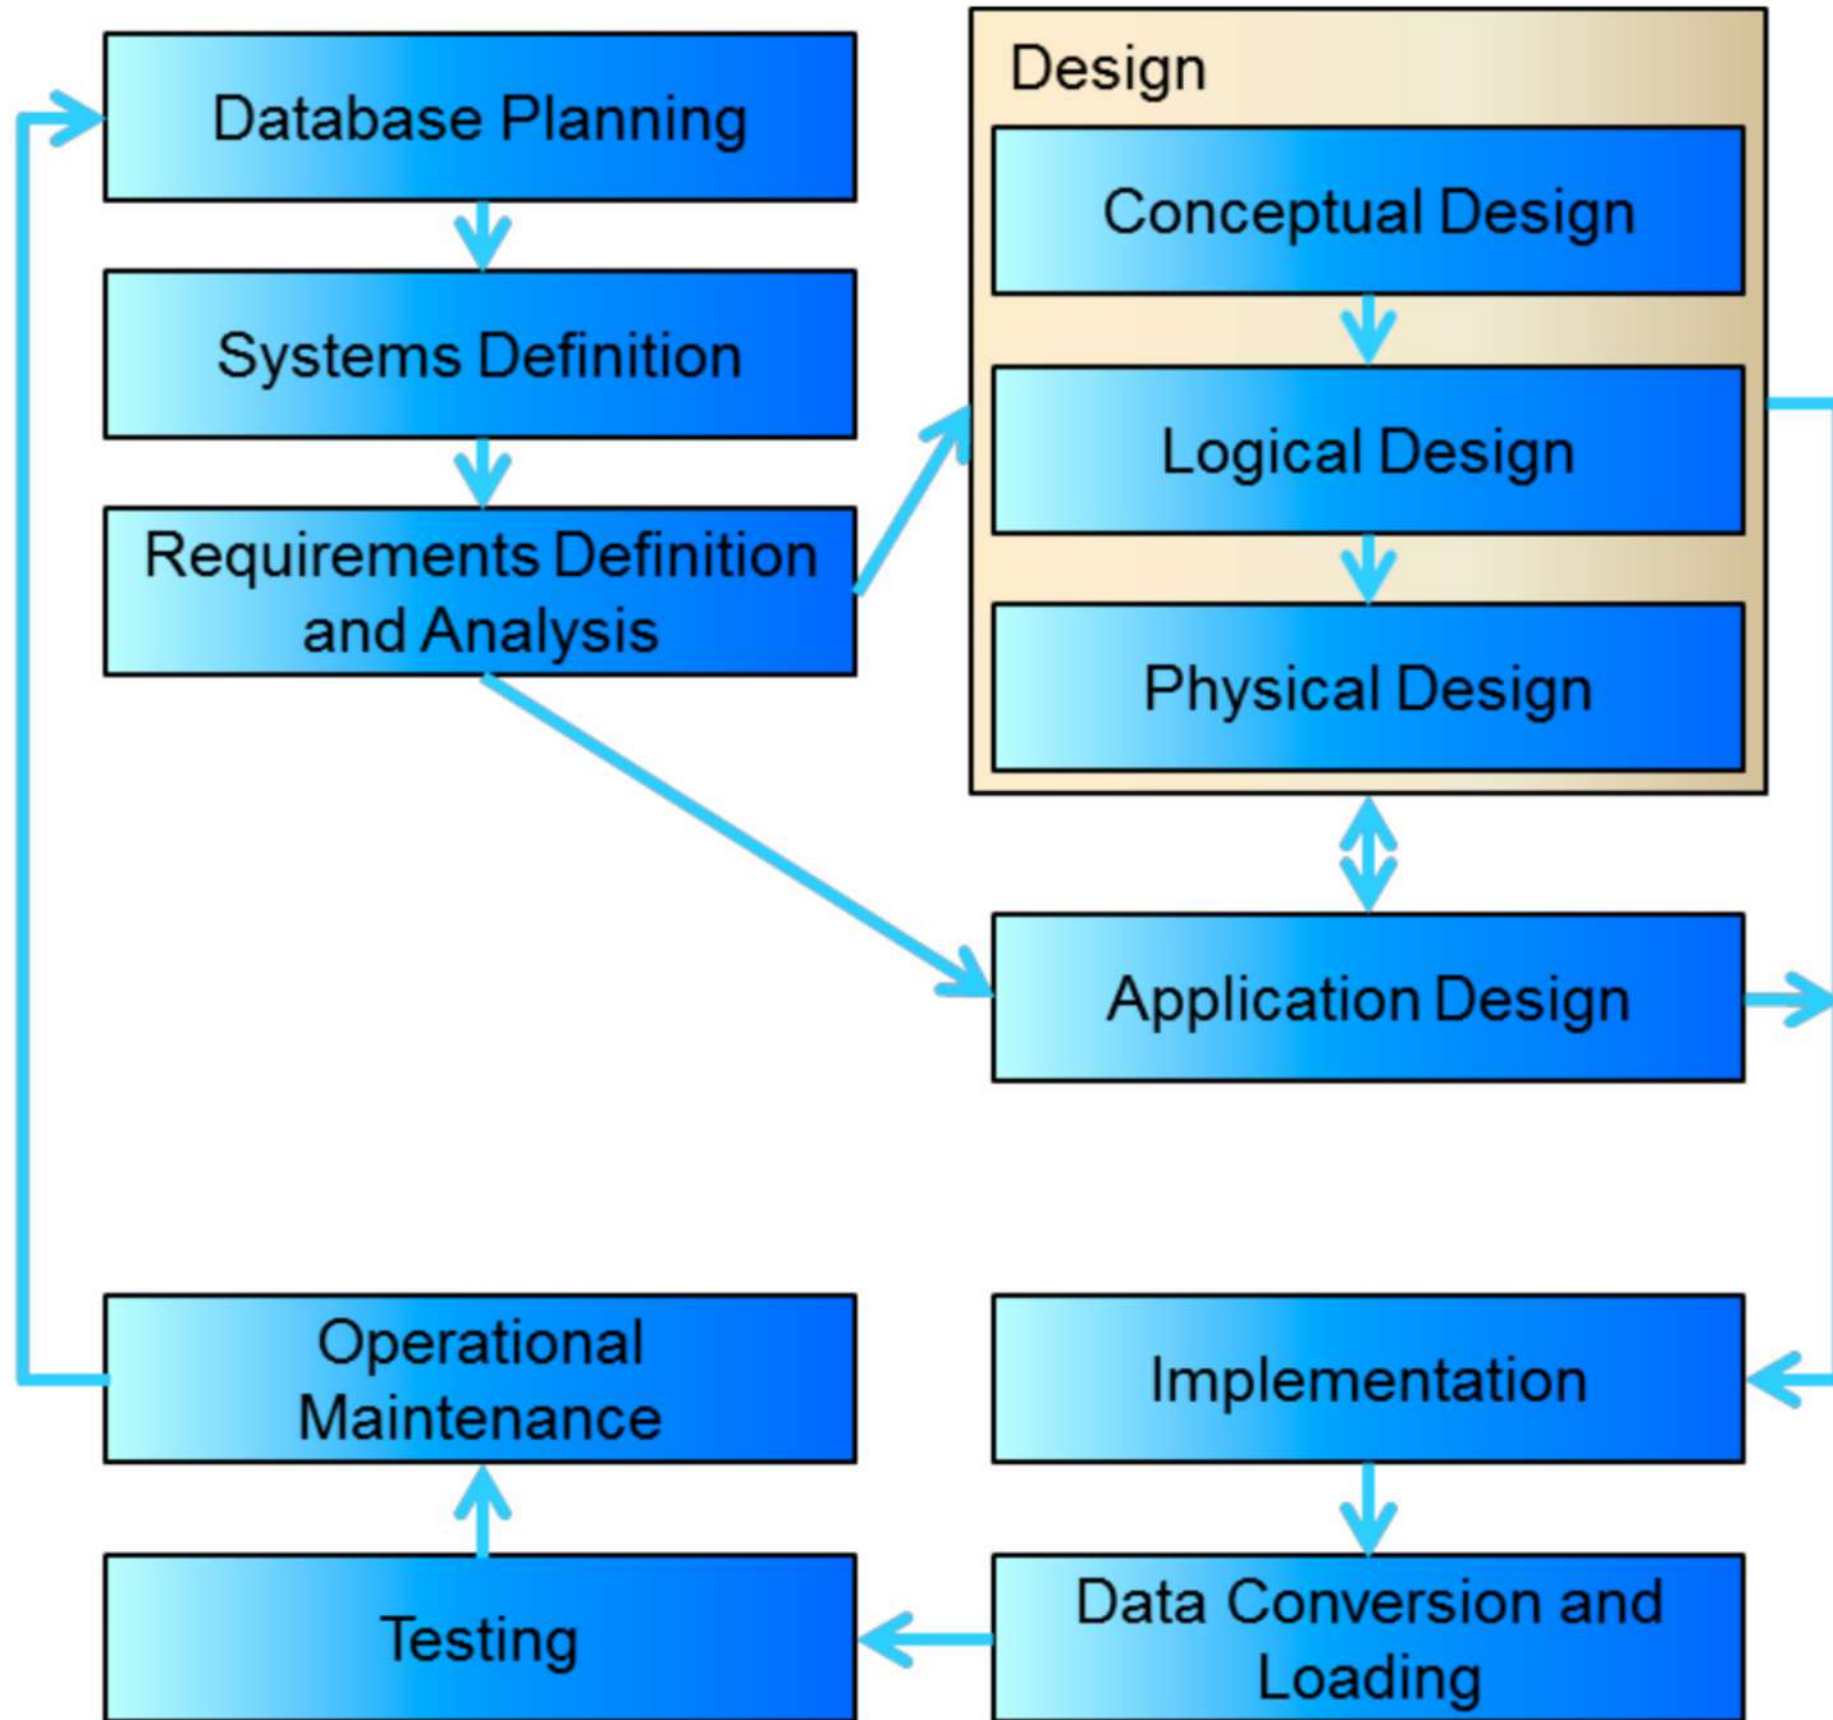

## **Modelling in practice (worded)**

Worded description  
→ DB model

**03**

## **Modelling w/ MySQL**

Creating models  
in MySQL  
Workbench

# Database Development Lifecycle

What is the **purpose** of each stage?

What do we, as database designers,  
**need to do** in each stage?

A

Preparation:  
What are we building?

Database Planning  
↓  
Systems Definition  
↓  
Requirements Definition  
and Analysis

B

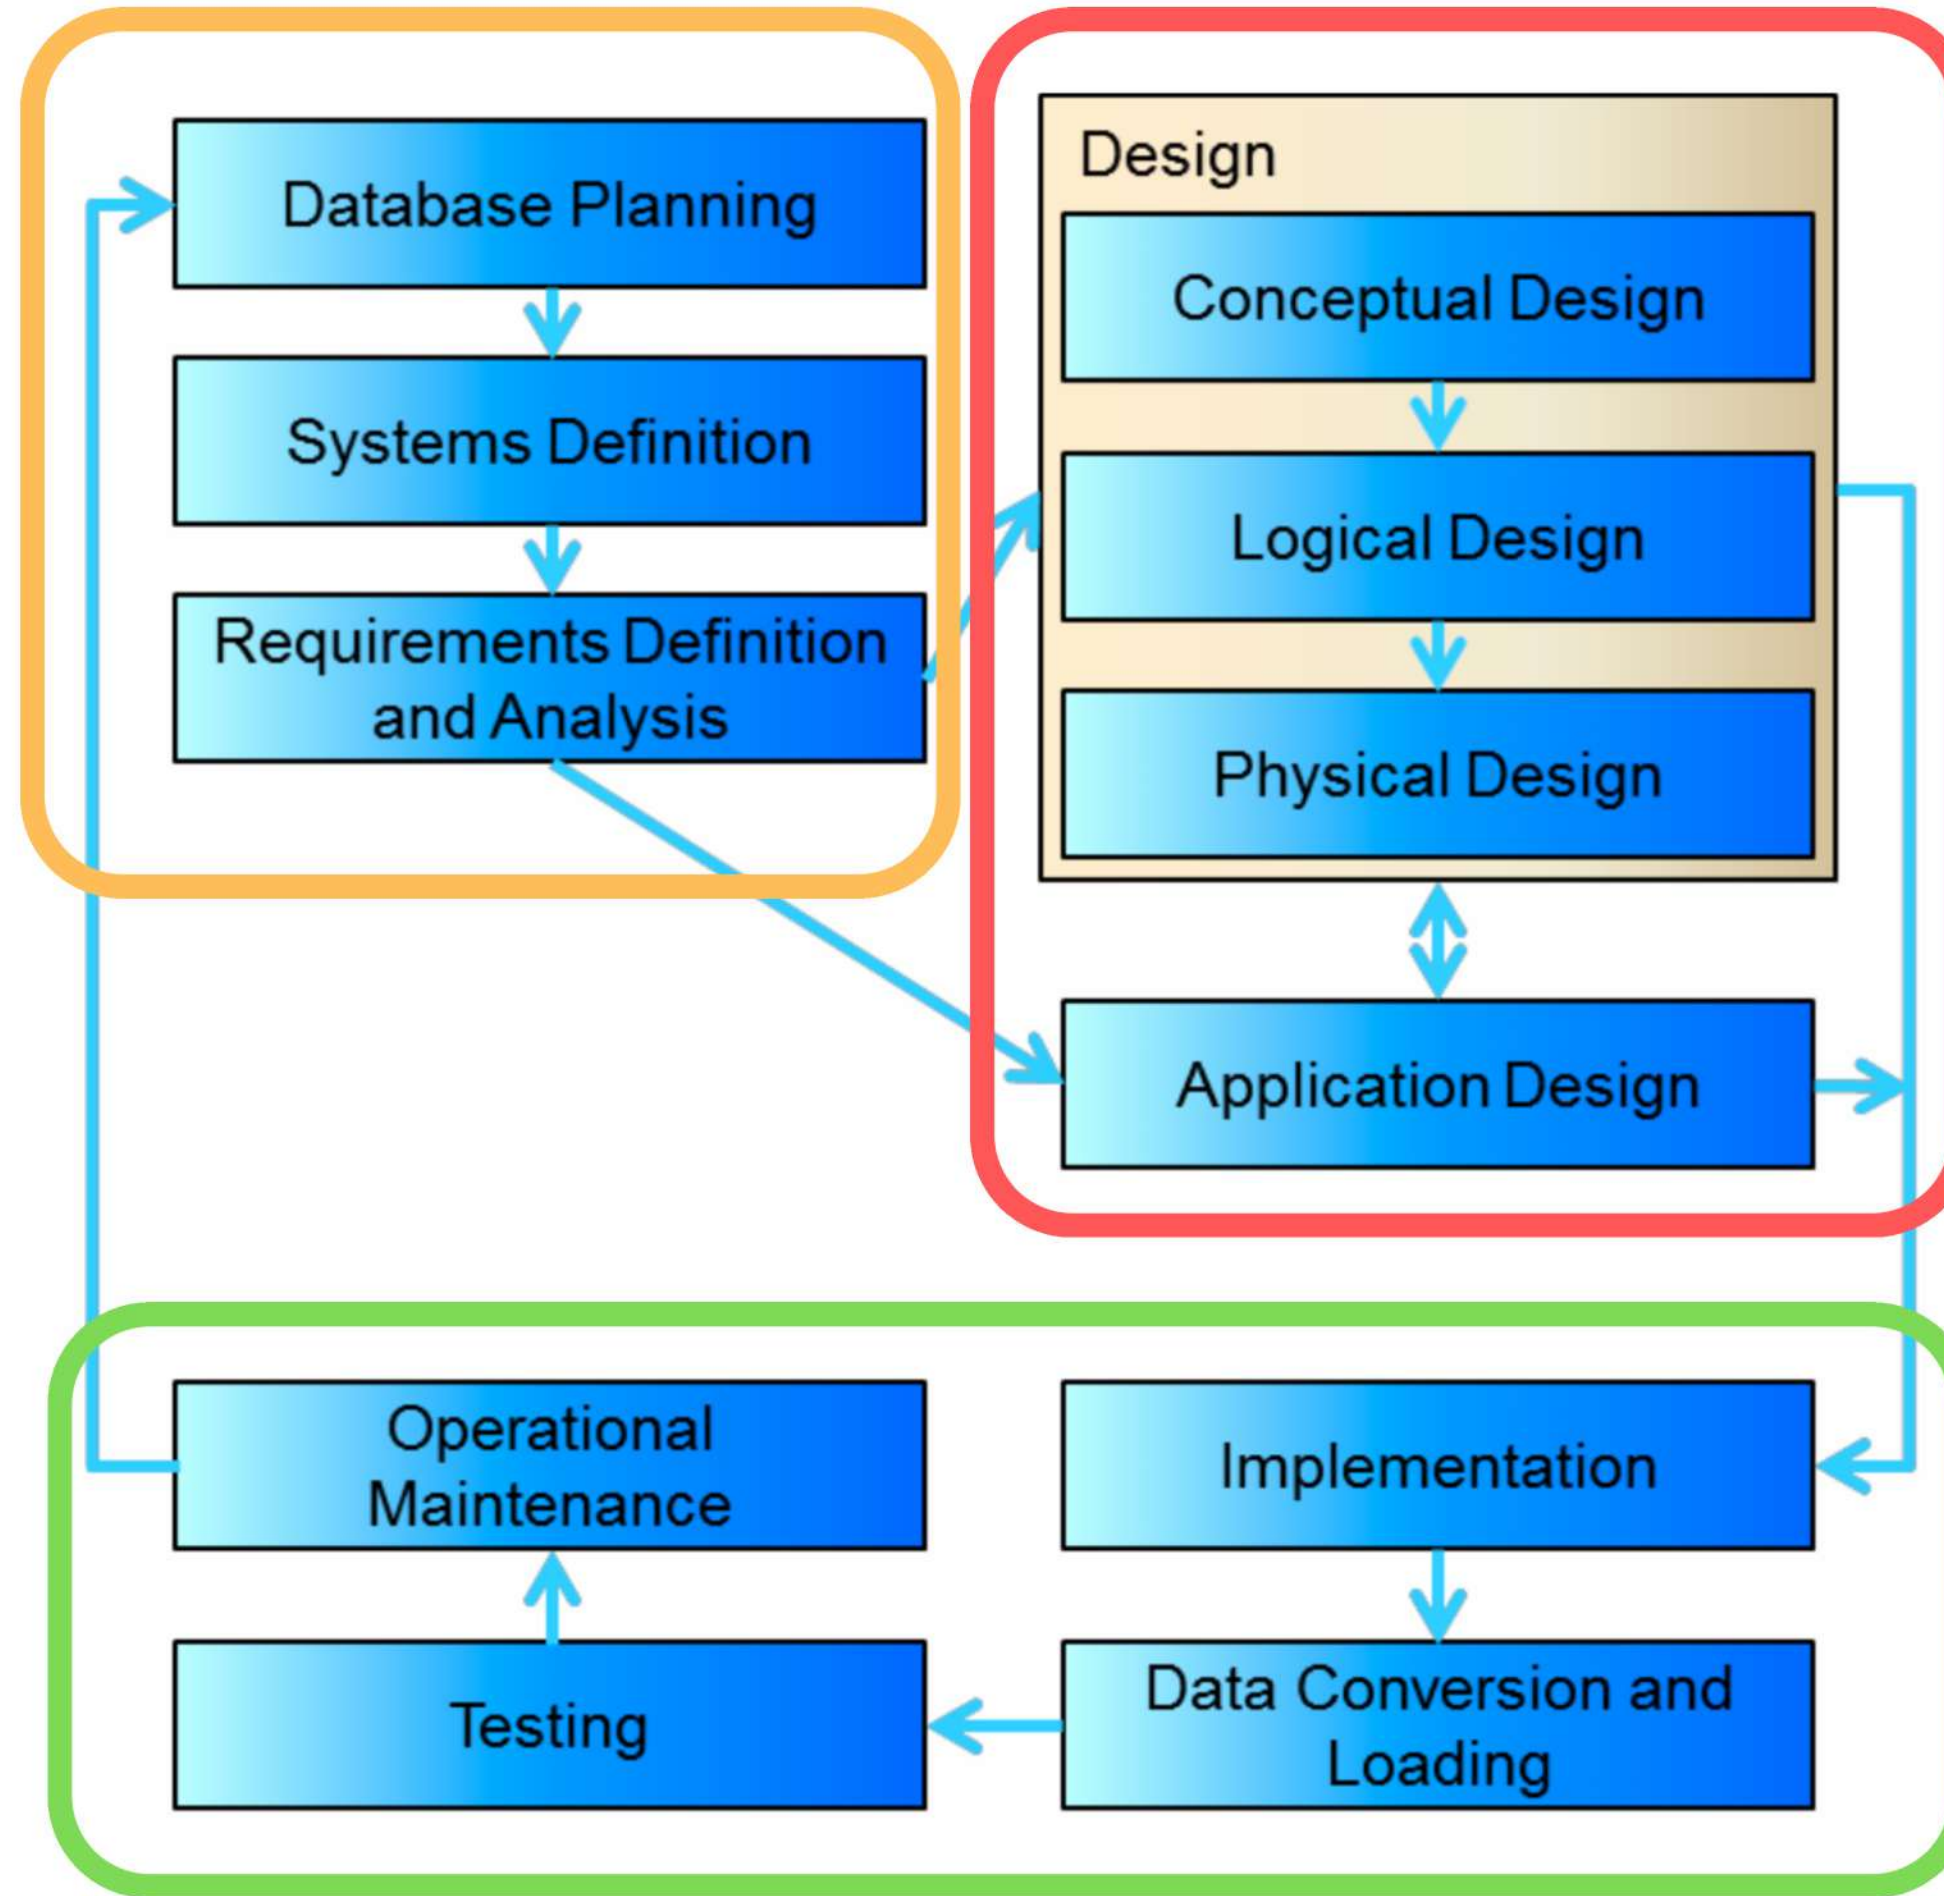

Design:  
How are we building it?

Design  
↓  
Conceptual Design  
↓  
Logical Design  
↓  
Physical Design  
↕  
Application Design

C

Execution:  
How do we create and  
run it?

Operational Maintenance  
↑  
Testing  
←  
Data Conversion and Loading  
↓  
Implementation

# Preparation

1

How does the enterprise work?

2

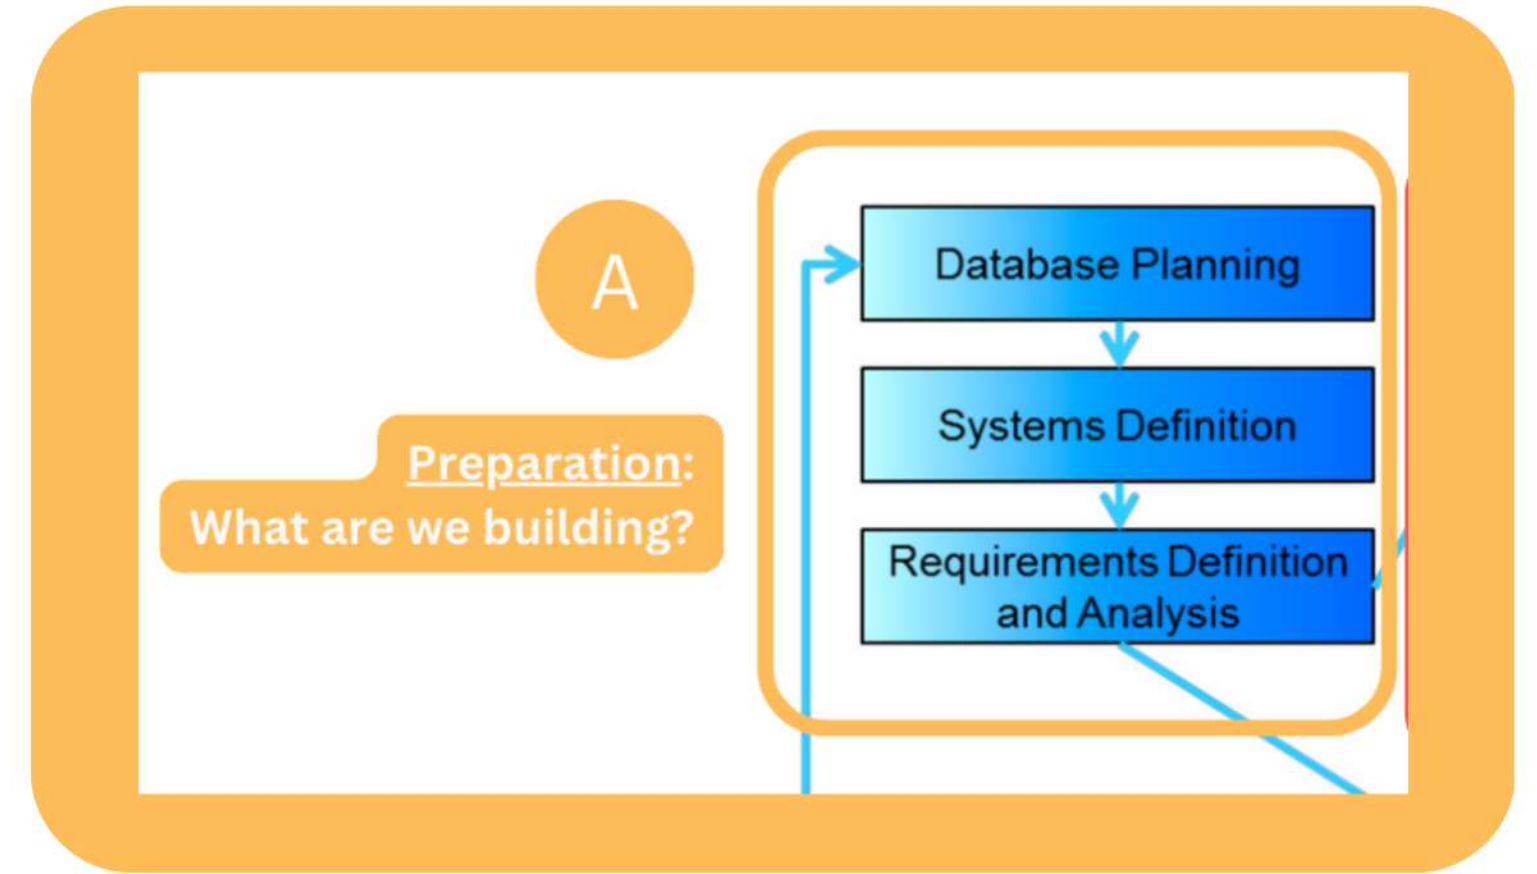

Scope & boundaries

3

Requirements

1

How does the enterprise work?

A

Preparation:  
What are we building?

Database Planning

Systems Definition

Requirements Definition  
and Analysis

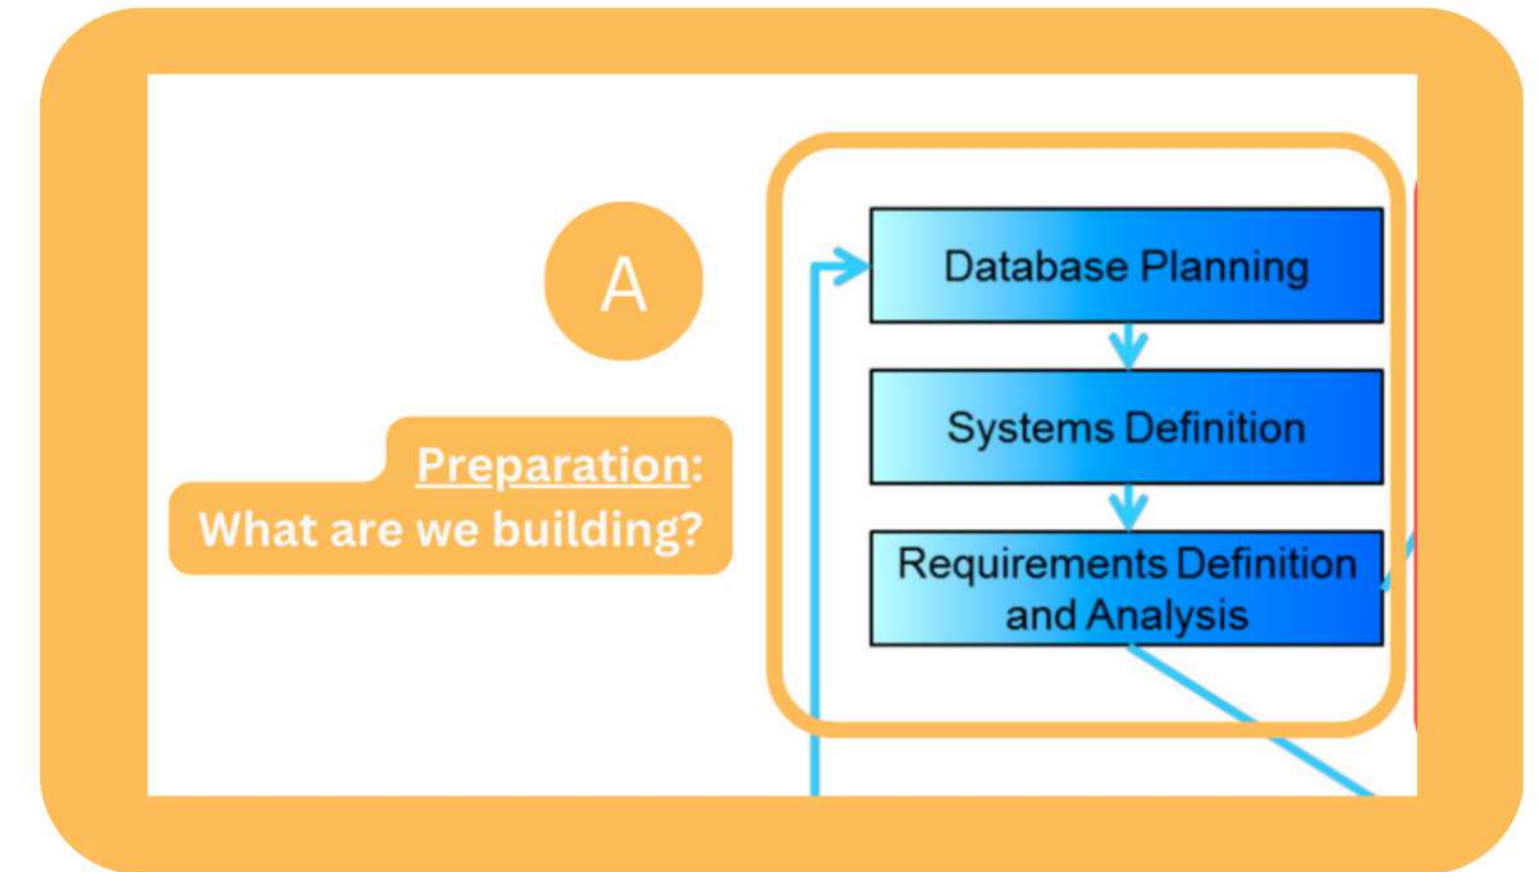

## 1. Database Planning \*

- Purpose: Understanding the **context** of DB
- Need to do: Understanding building blocks of the enterprise
  - e.g. departments
  - *Enterprise Data Model*

## 2. System Definition

- Purpose: Specify **scope and boundaries**
  - Users
  - Application areas

- Need to do:
  - Define how the system links w/ other organisational systems
    - Data sharing? replication?
  - Analyse different use cases

### 3. Requirements Definition & Analysis

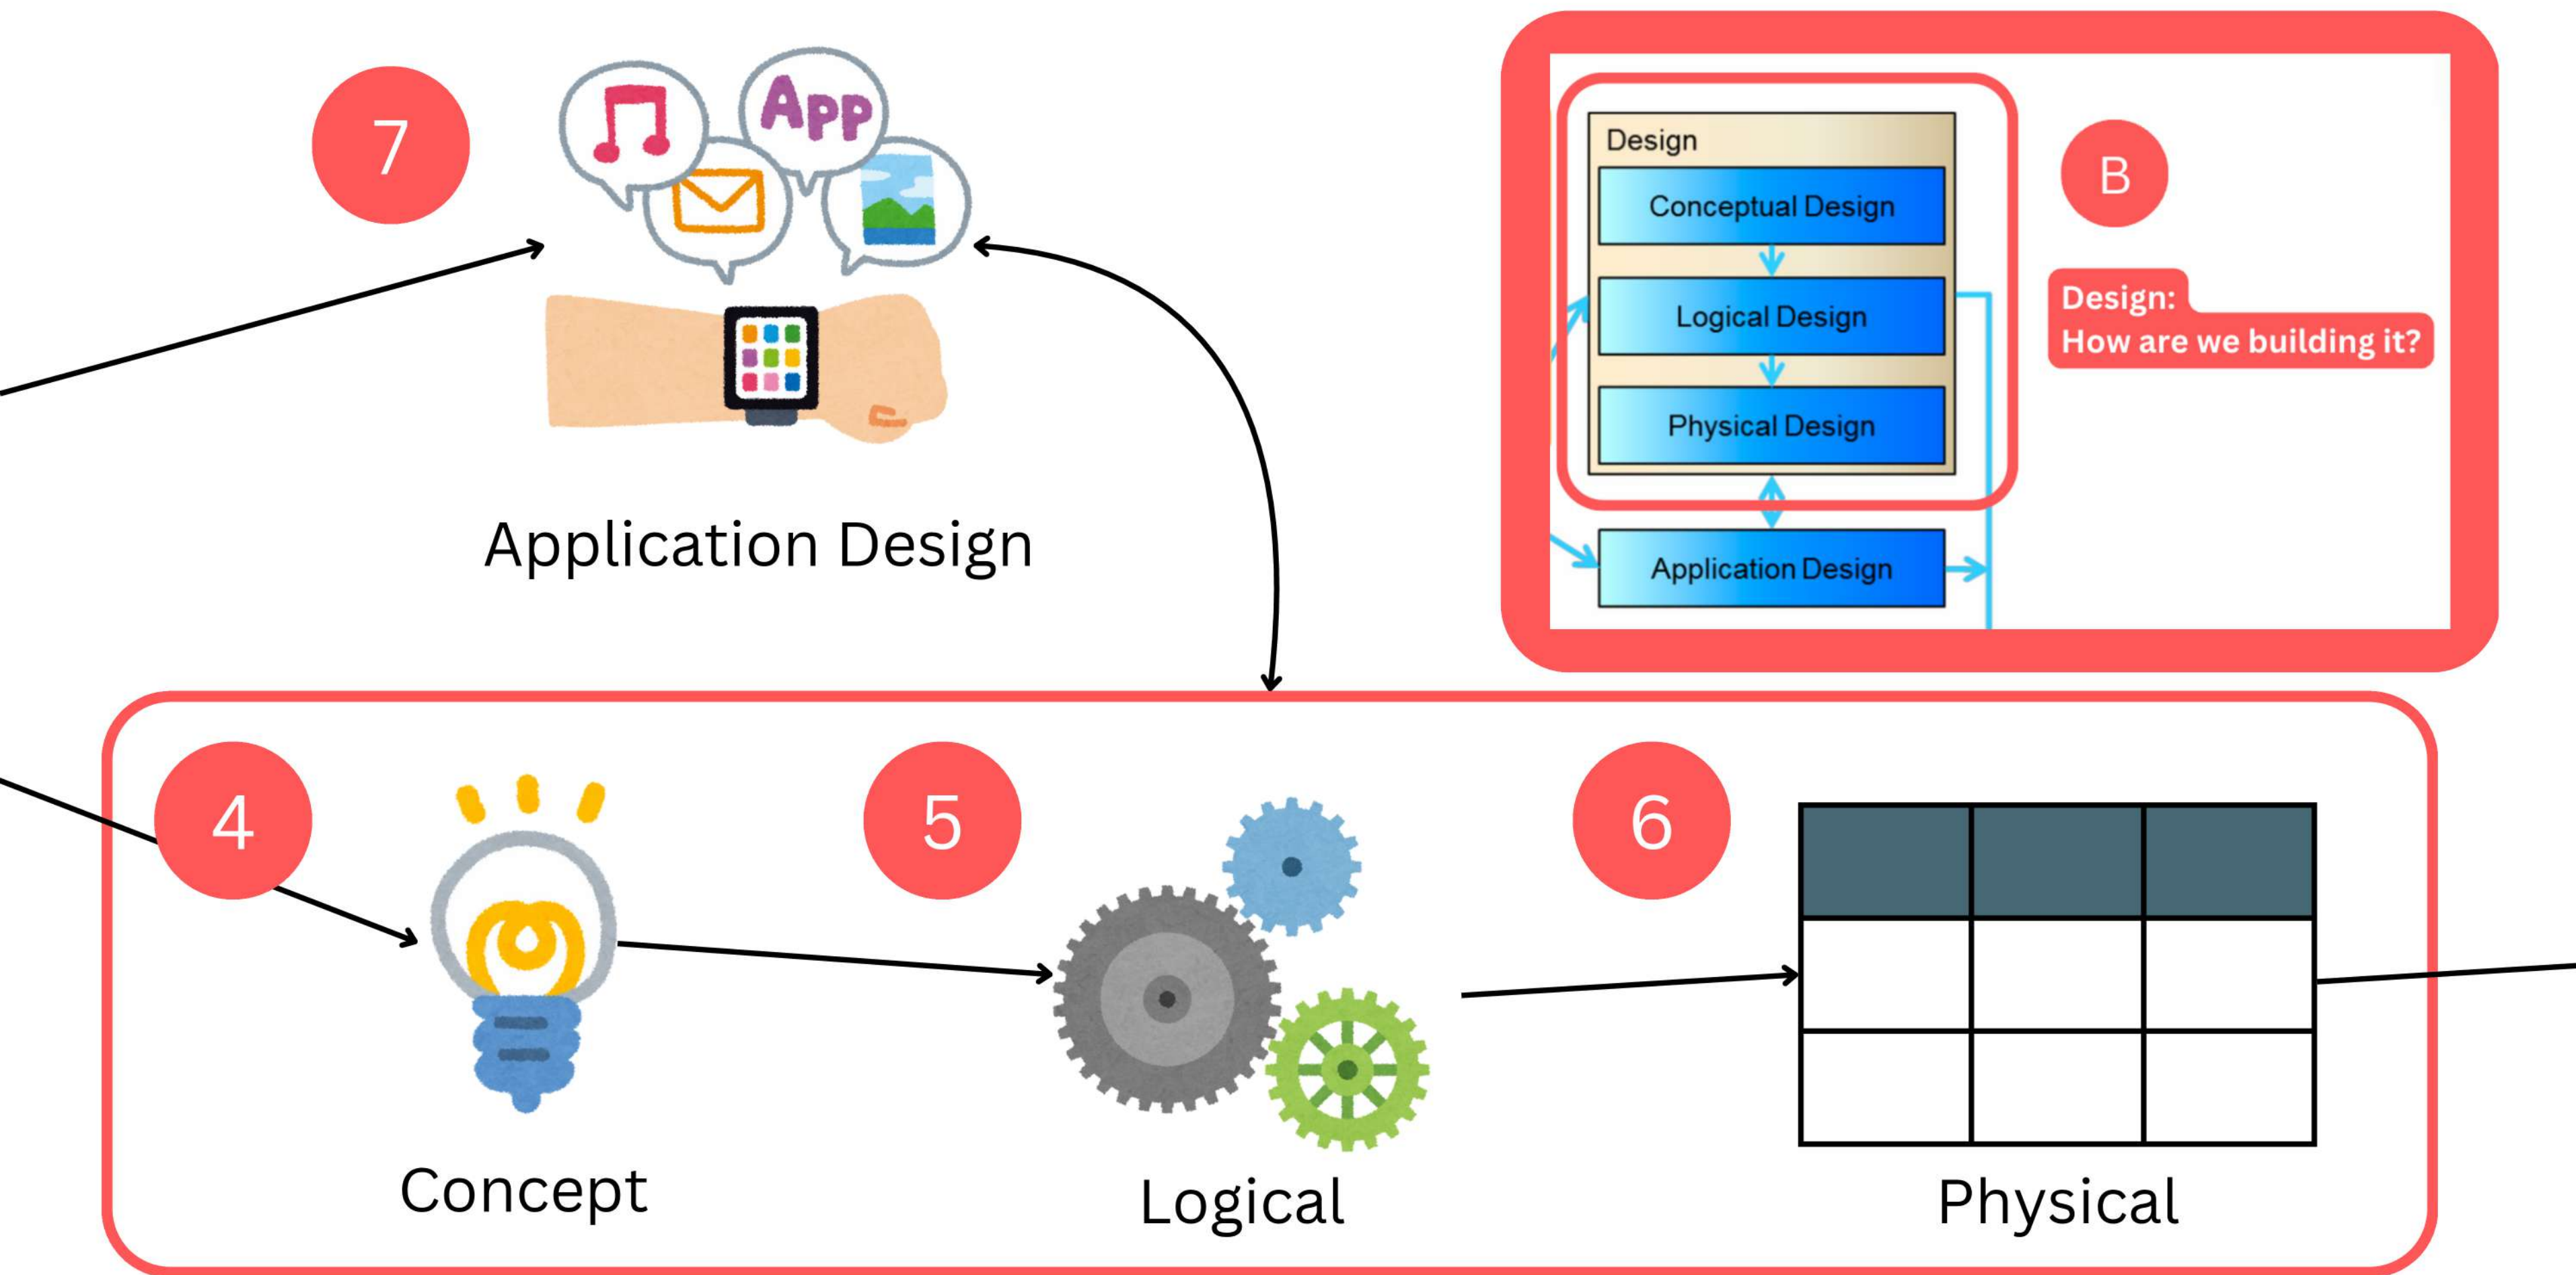

- Purpose: Collect & analyse **requirements**
- Need to do: Identify:
  - Business rules
  - Client requirements
- Extract business rules & requirements from ***requirement definition*** (written doc)
- Identify info. & any **constraints**

The background of the image is a landscape photograph with a strong red color overlay. It shows a range of mountains, with a prominent, rounded peak in the center-left. The sky is filled with soft, white clouds. The overall mood is serene and atmospheric.

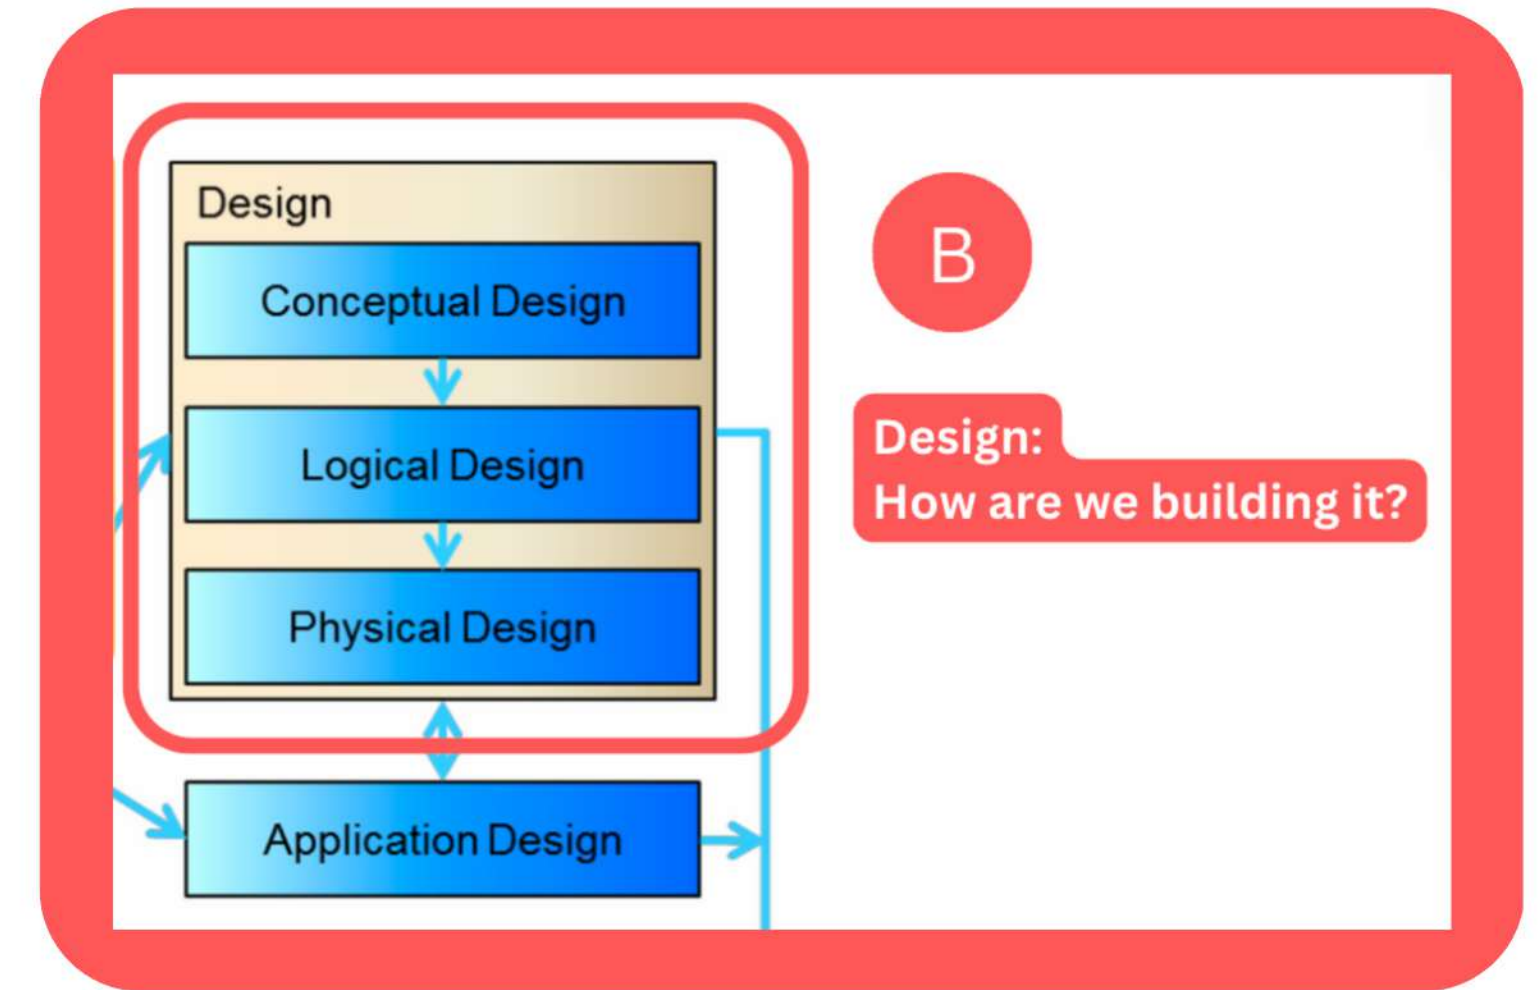

# Design

## 4. Conceptual Design

- Purpose: Construct **general idea** of how to model the data
  - **NO** physical / DB model / DBMS considerations

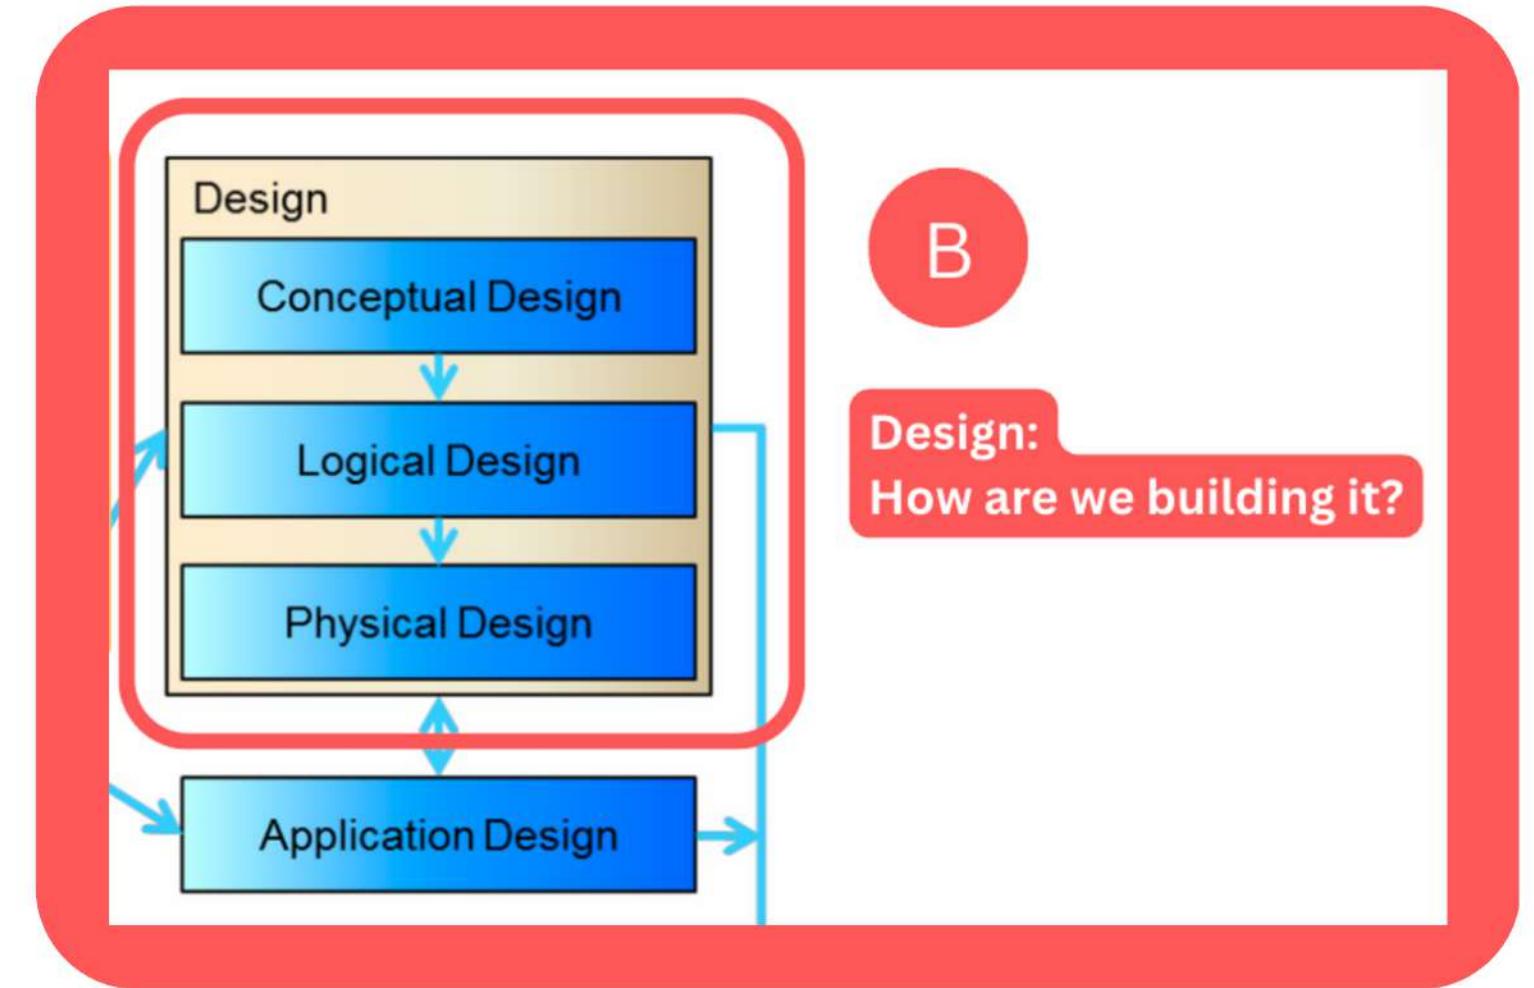

- Need to do:
  - Identify entities, attributes, relationships
  - **ER** diagrams

## 5. Logical Design

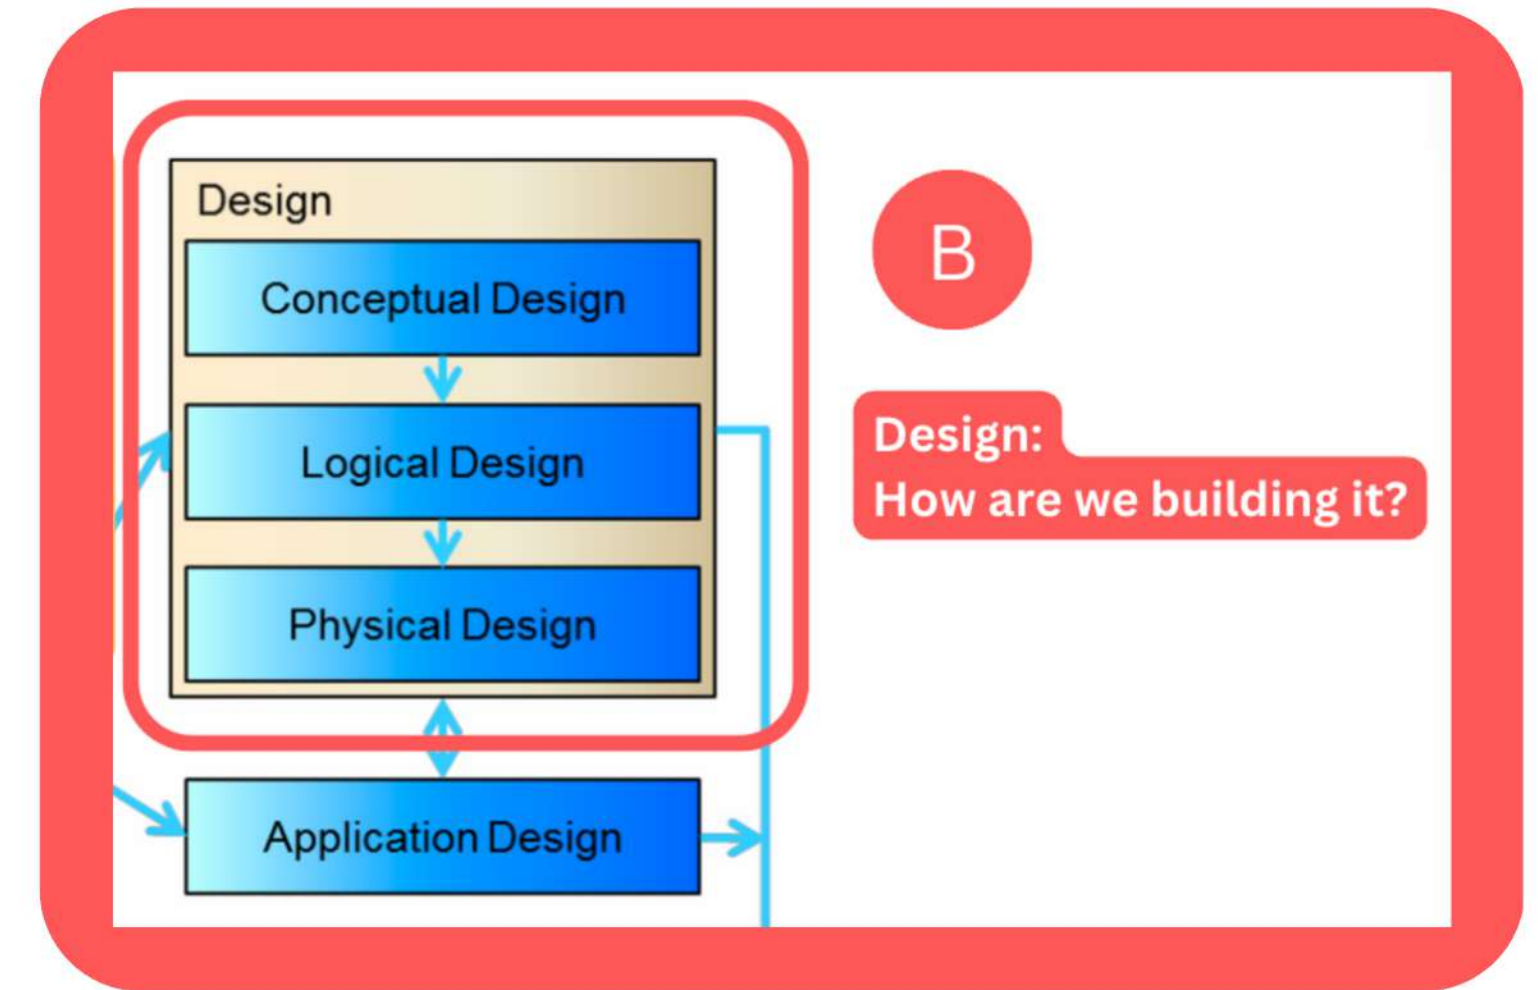

- Purpose: Decide on DB model
  - **NOT** database format / DBMS
- Need to do:
  - + FK, PFK
  - **Relational** model

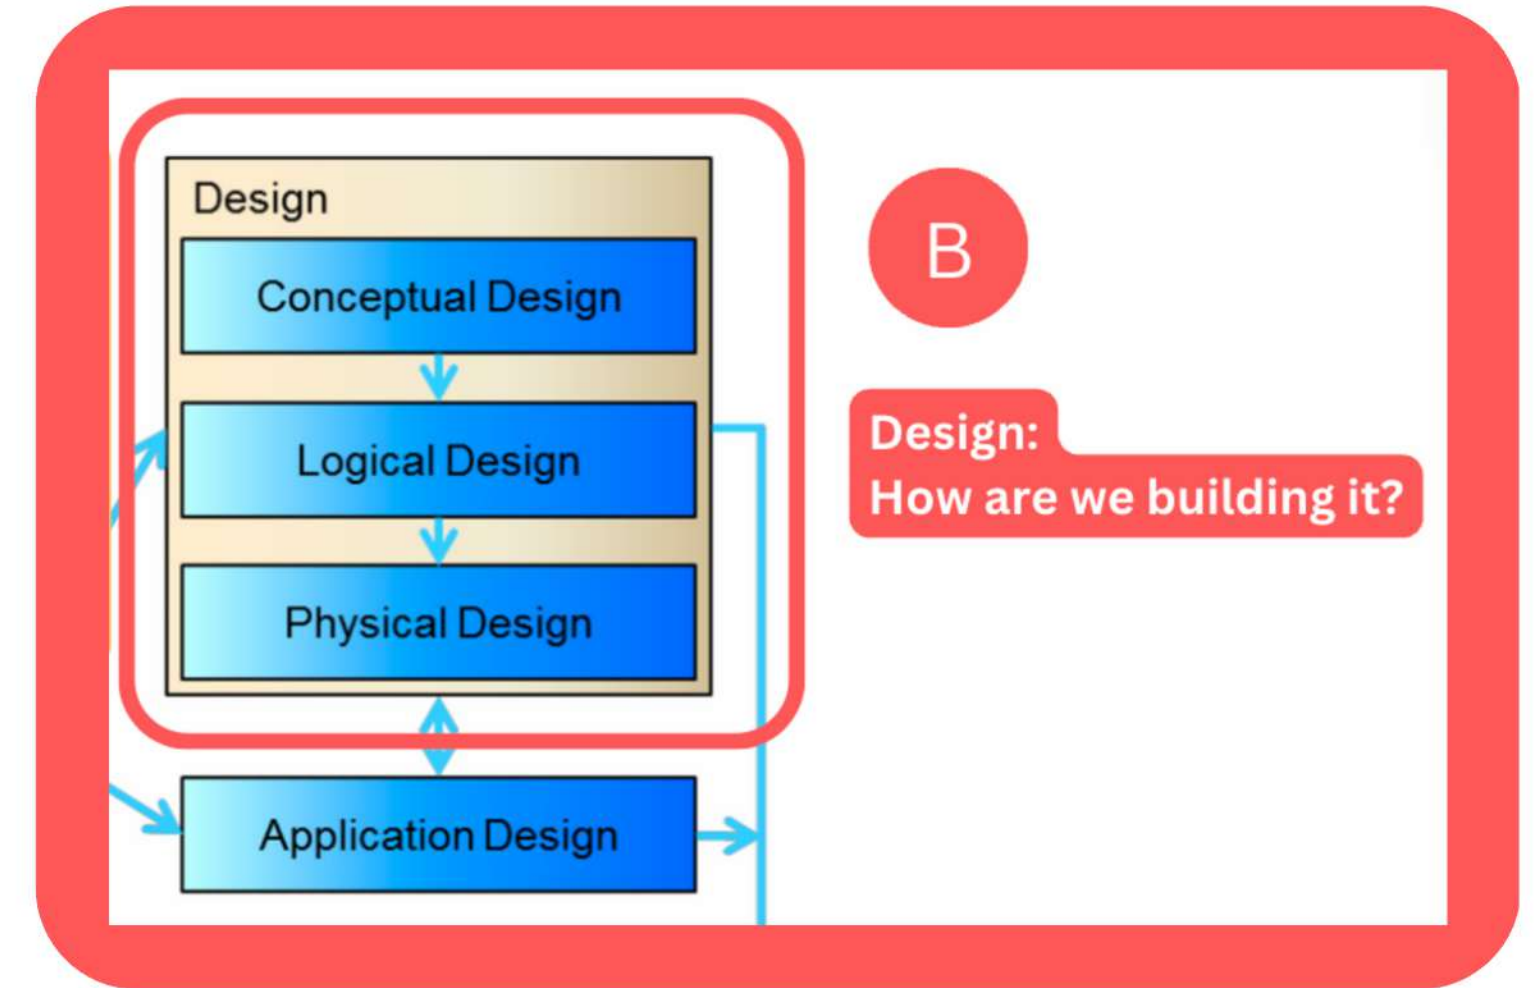

## 6. Physical Design

- Purpose: Decide DBMS
- Need to do:
  - + Data types
  - (file organisation, indexing...)

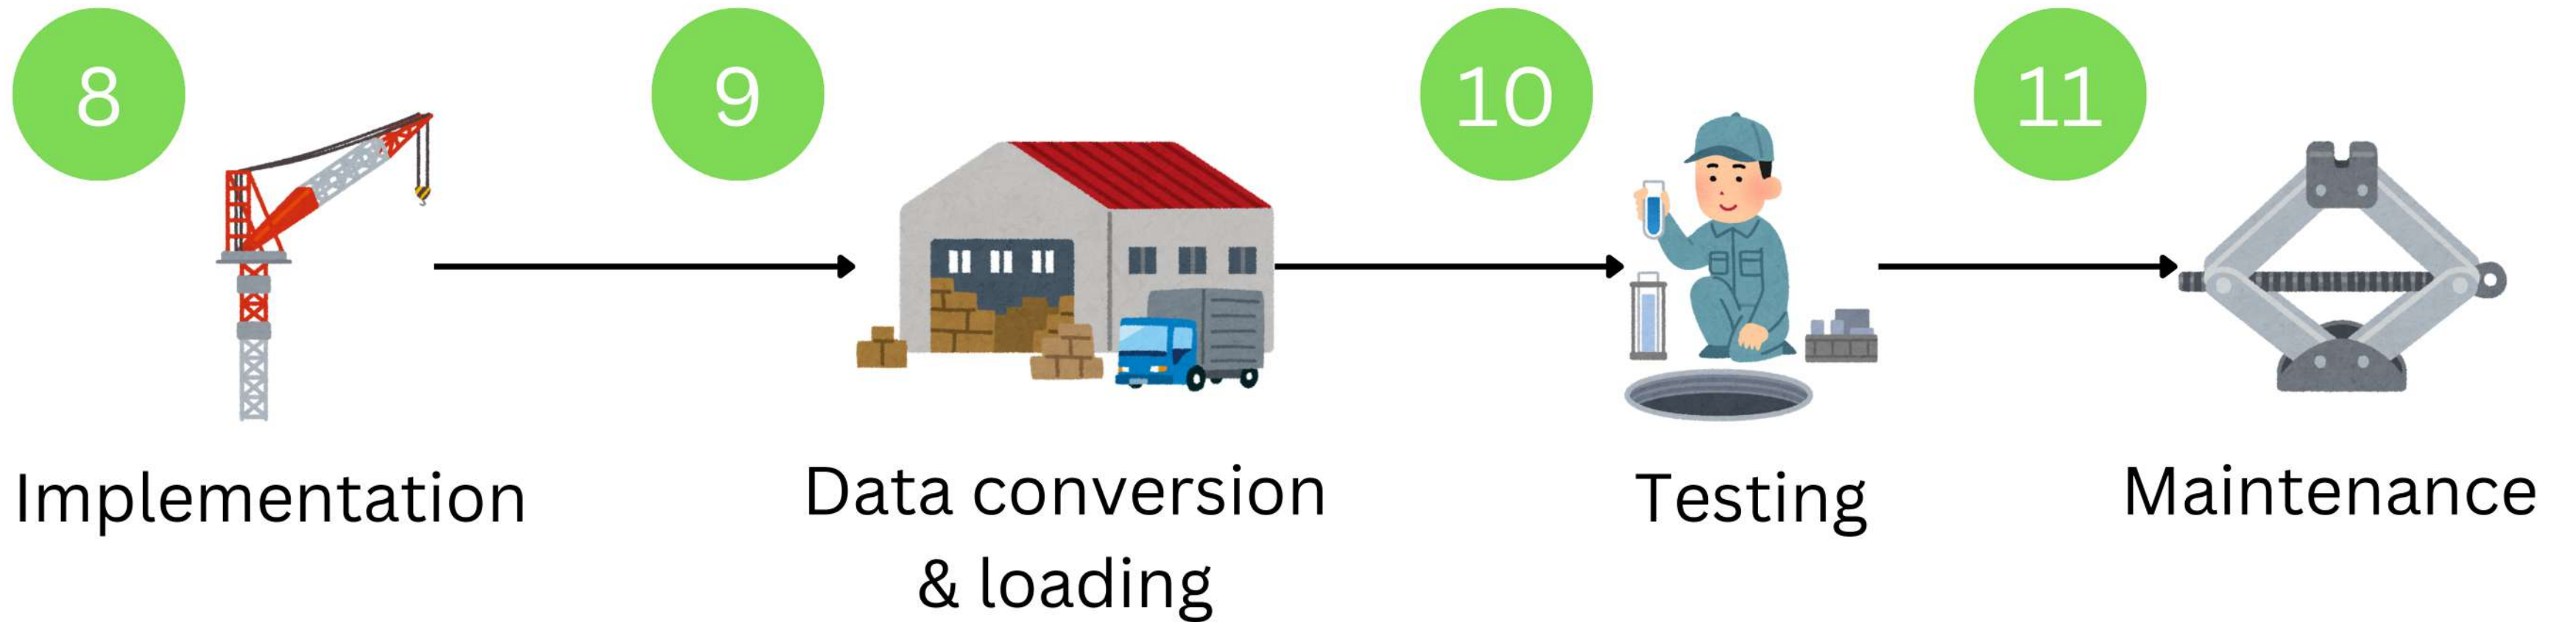

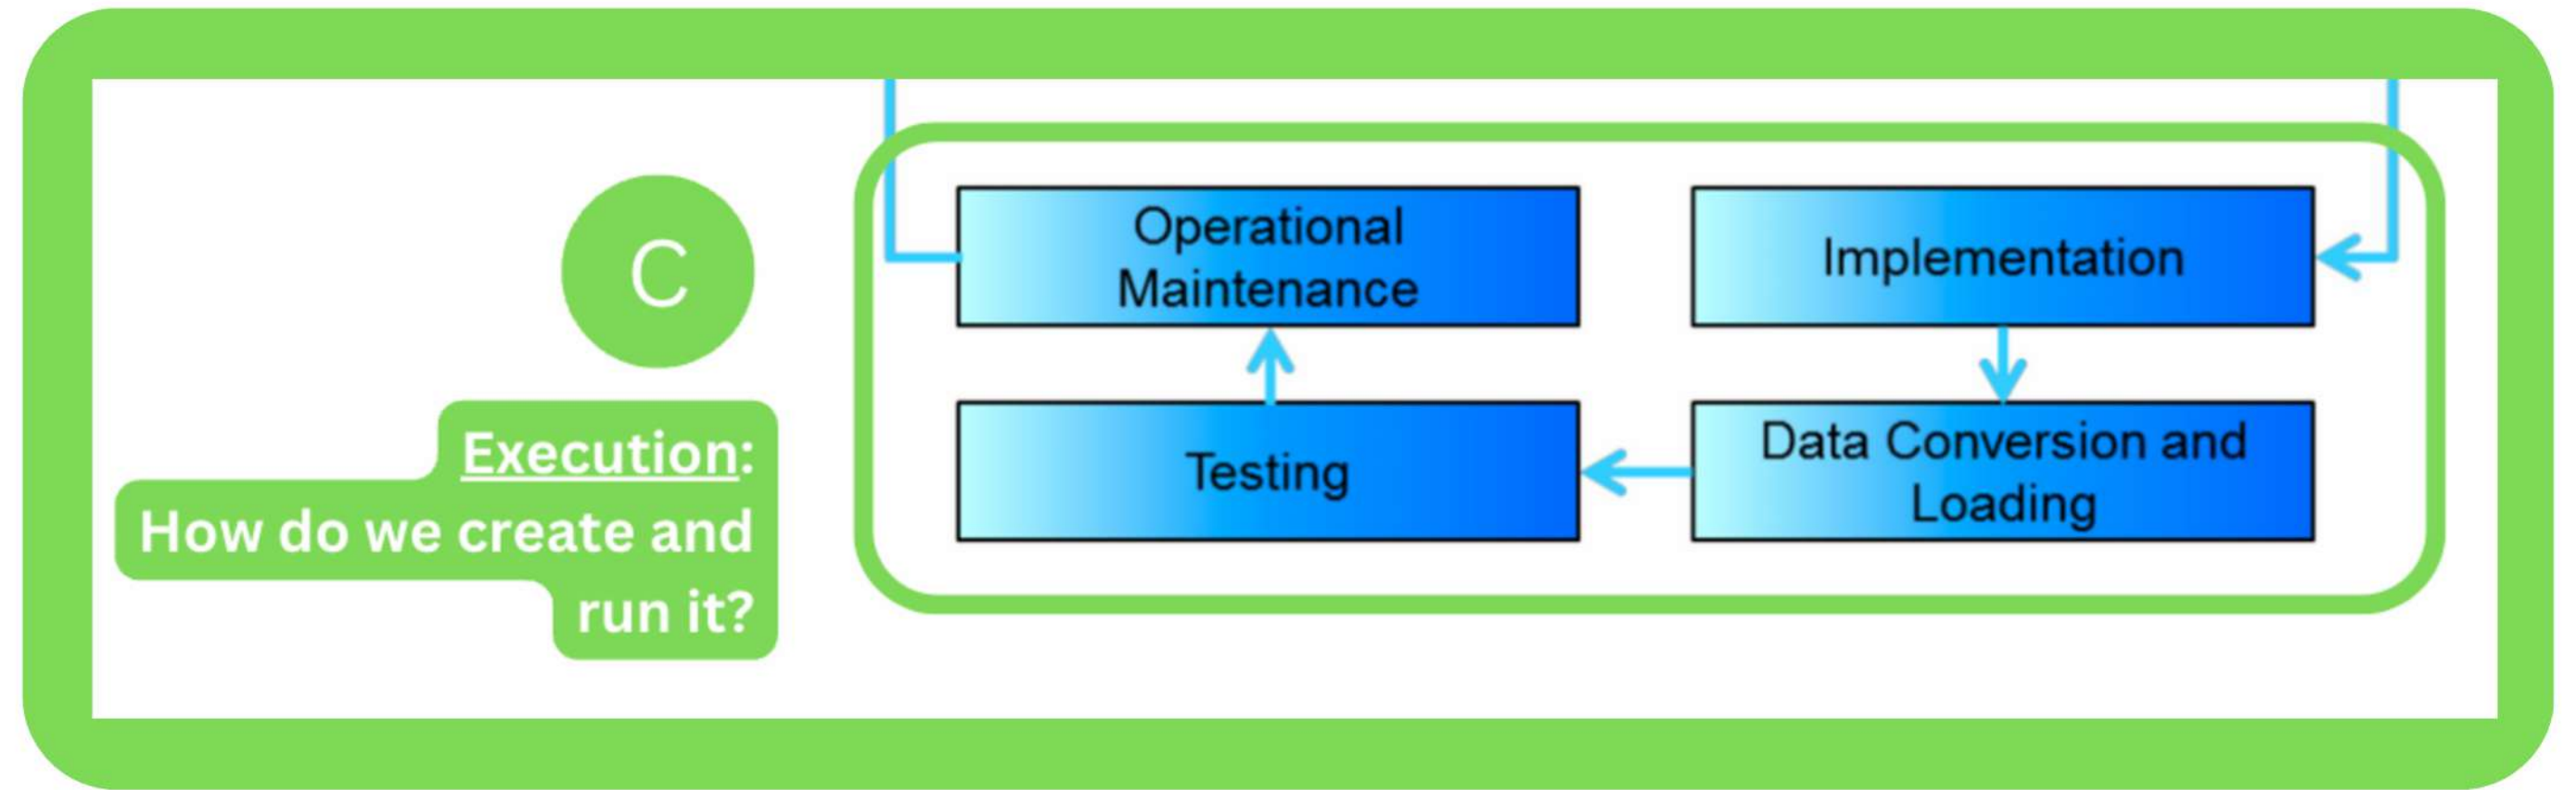

## 7. Application Design

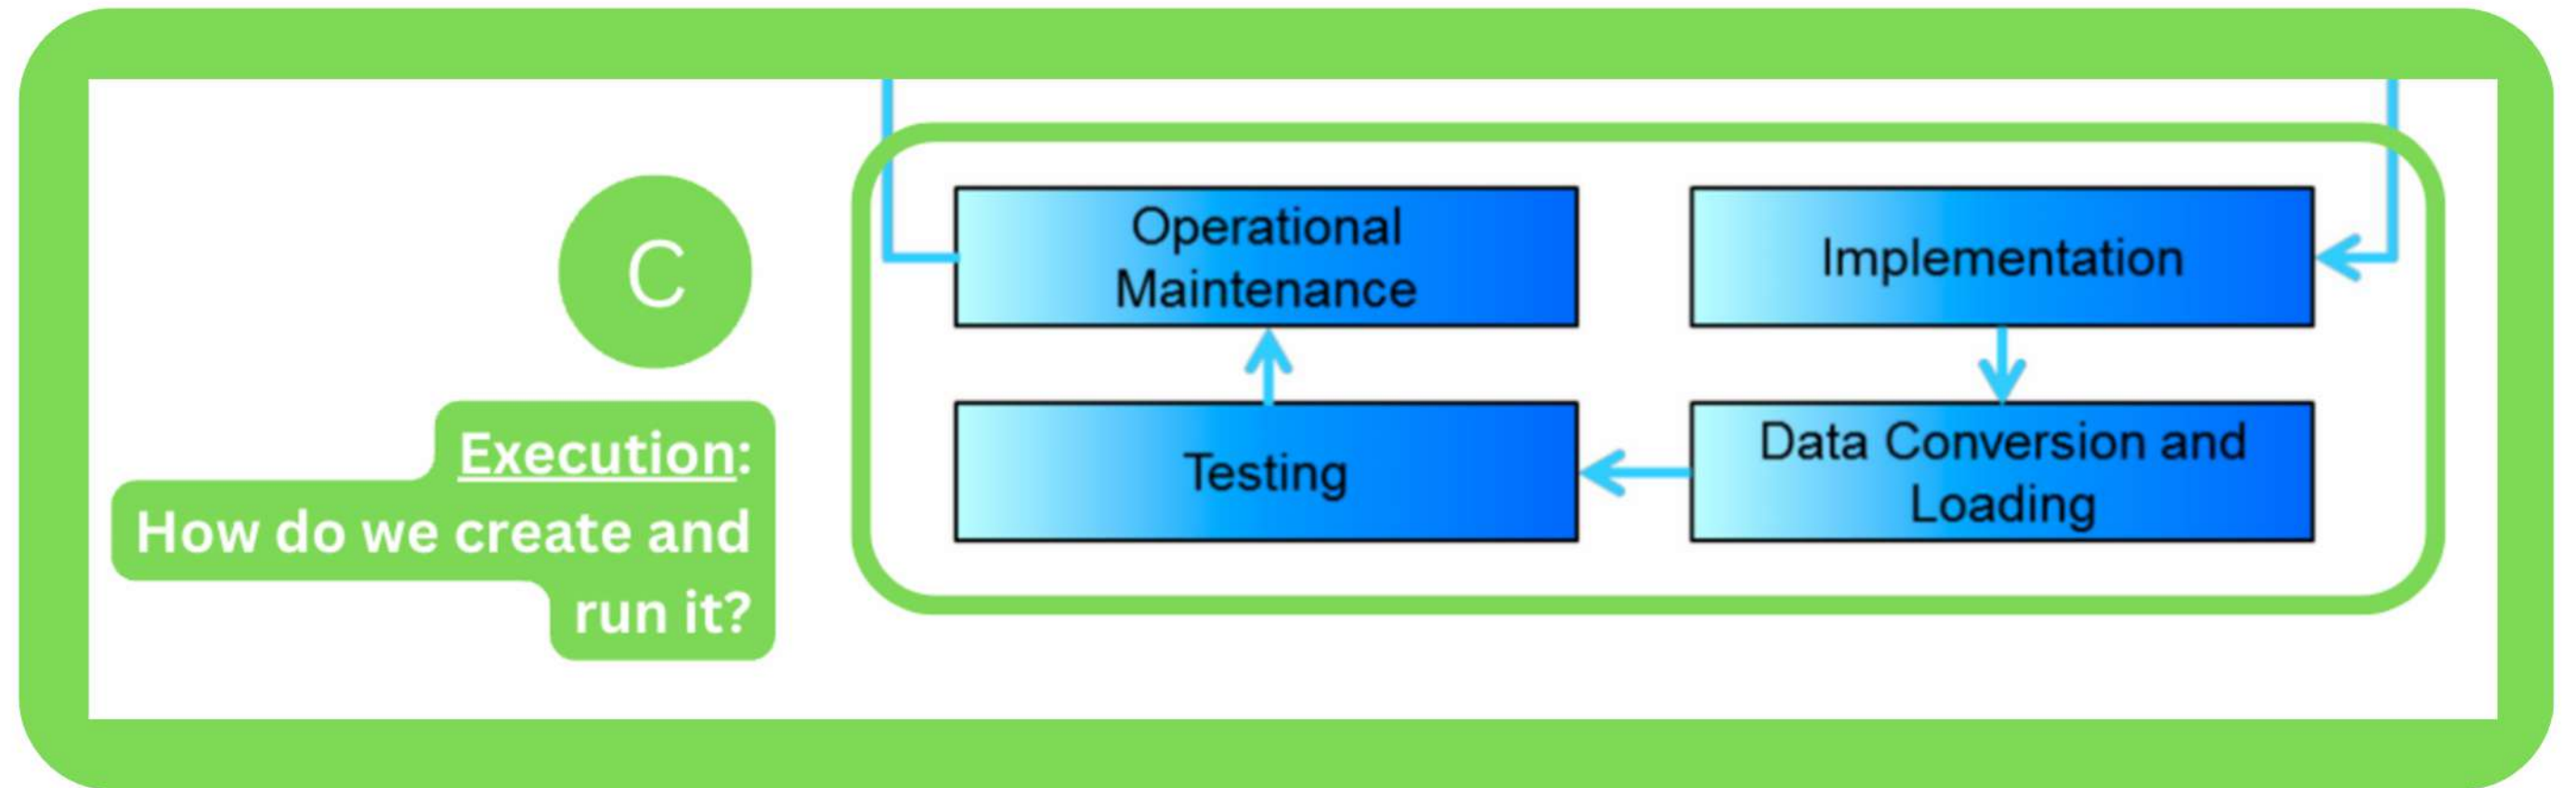

- Purpose: Design UI & application that uses system
- Need to do: At the same time as other design stages (back & forth)

The background of the slide is a green-tinted photograph of a mountainous landscape. The mountains are layered, with some peaks more prominent than others, creating a sense of depth. The sky is filled with soft, white clouds. The overall color palette is a monochromatic green, ranging from light to dark tones.

# Execution

## 8. Implementation

- Purpose: Code up DB
- Need to do:
  - Allow for CRUD actions

8

Implementation

9

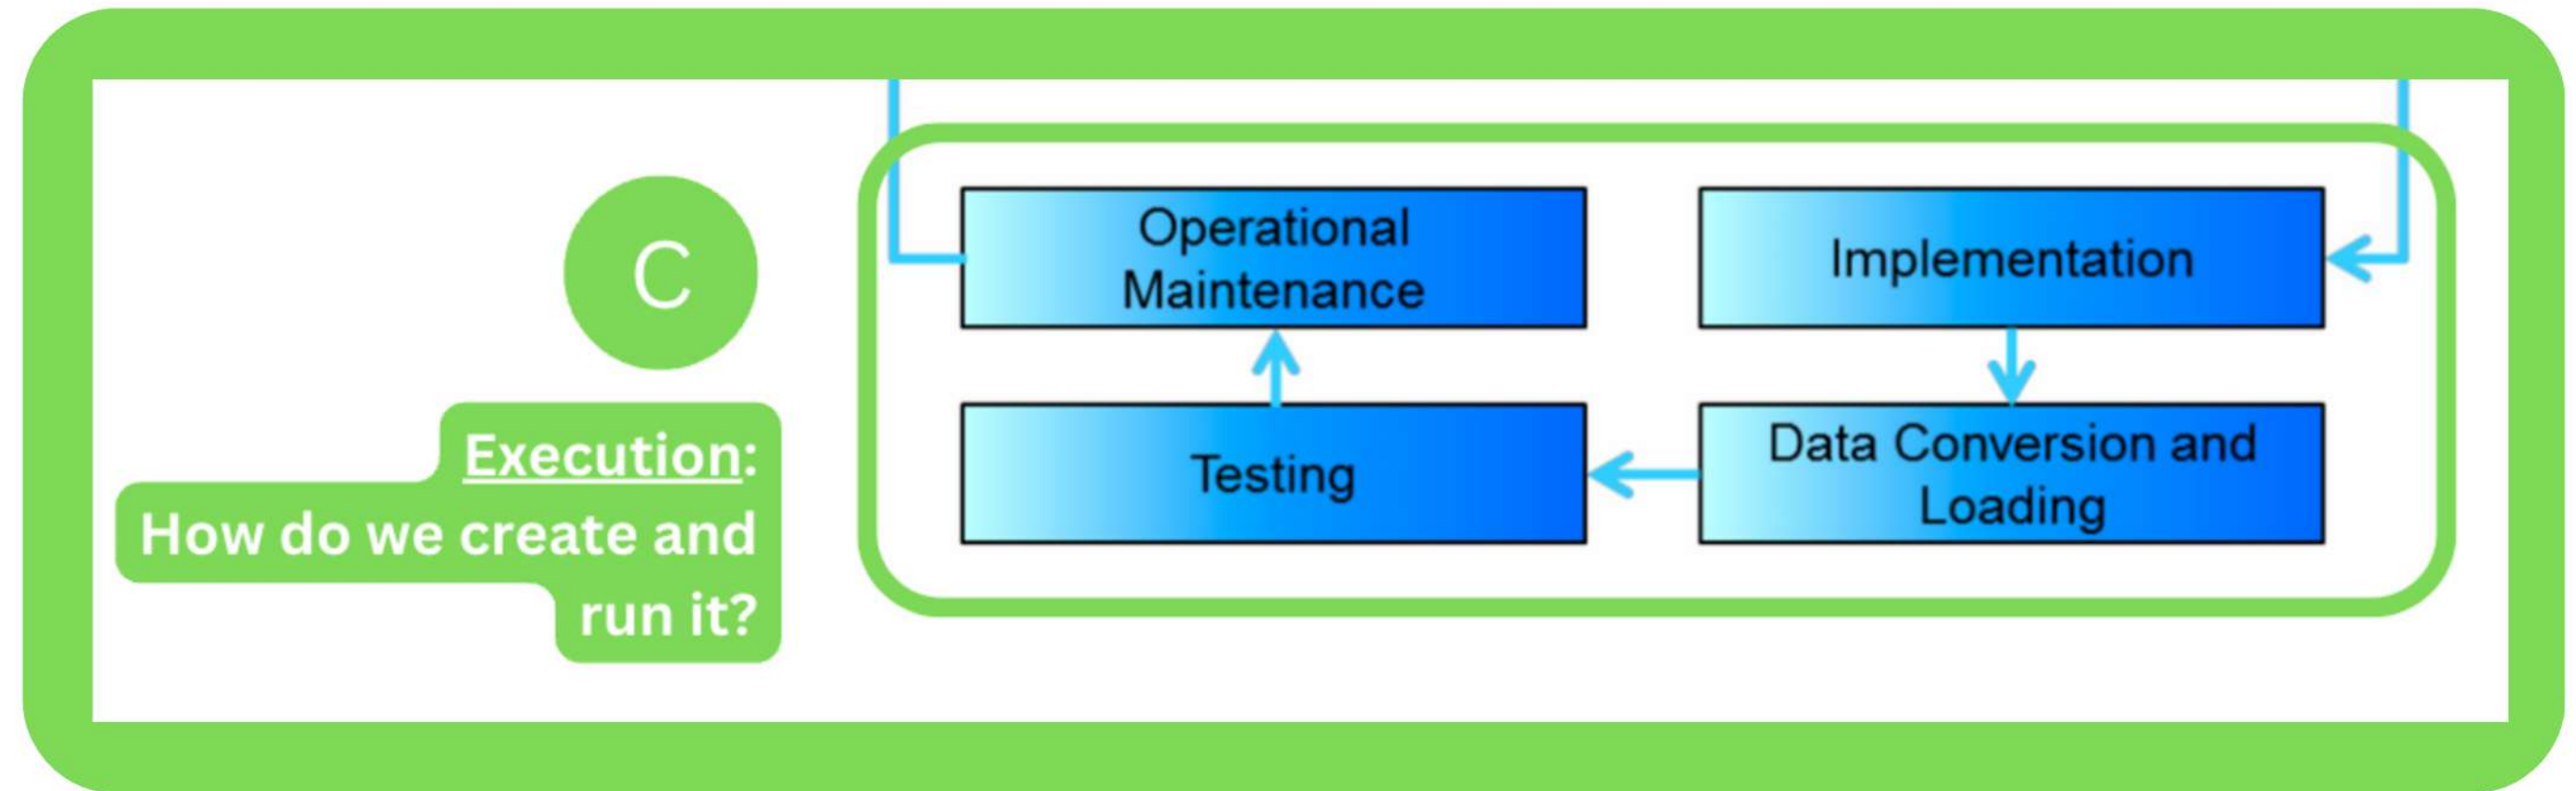

Data conversion  
& loading

## 9. Data Conversion & Loading \*

- Purpose / Need to do:  
Transfer existing data  
into system

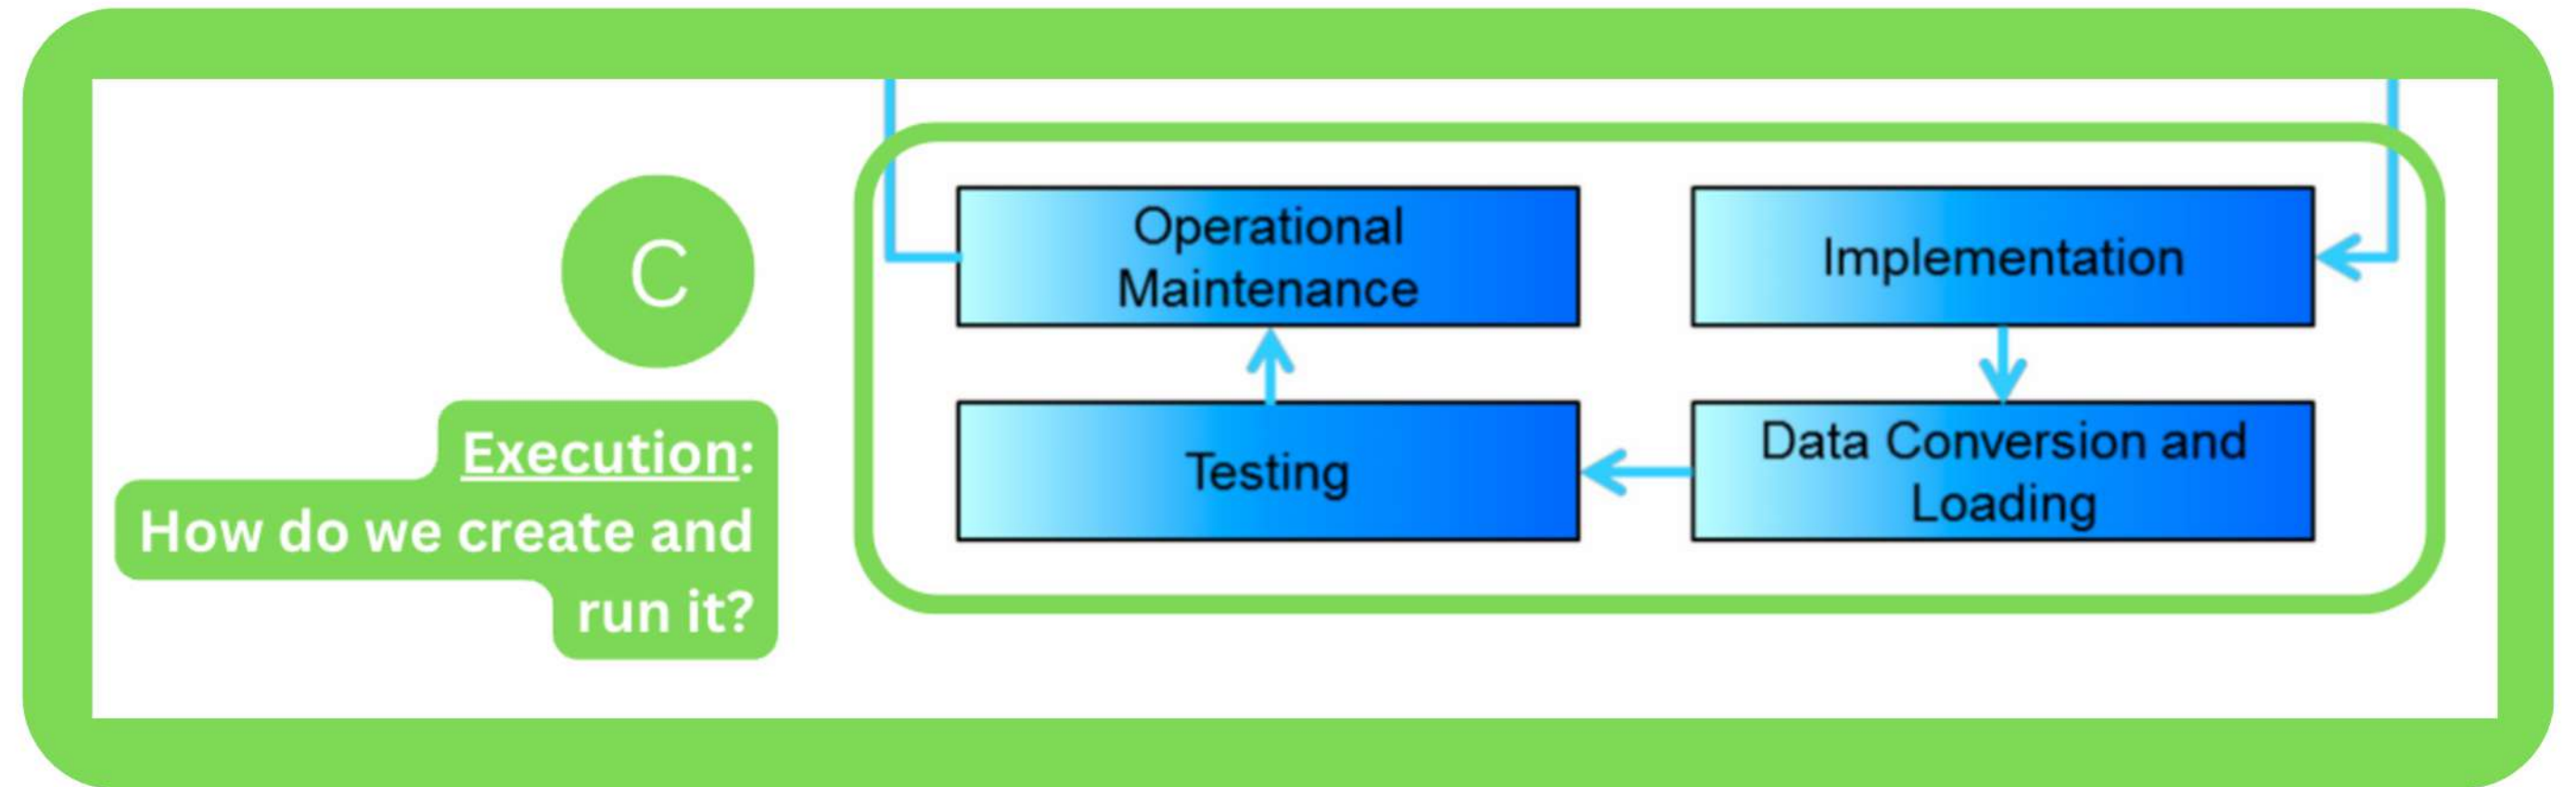

## 10. Testing

- Purpose: Find errors
- Need to do: Analyse:
  - Performance, Robustness, Recoverability, Adaptability

## 11. Operational Maintenance

- Purpose: Maintain system to work properly
- Need to do:
  - Monitoring, maintaining, updating

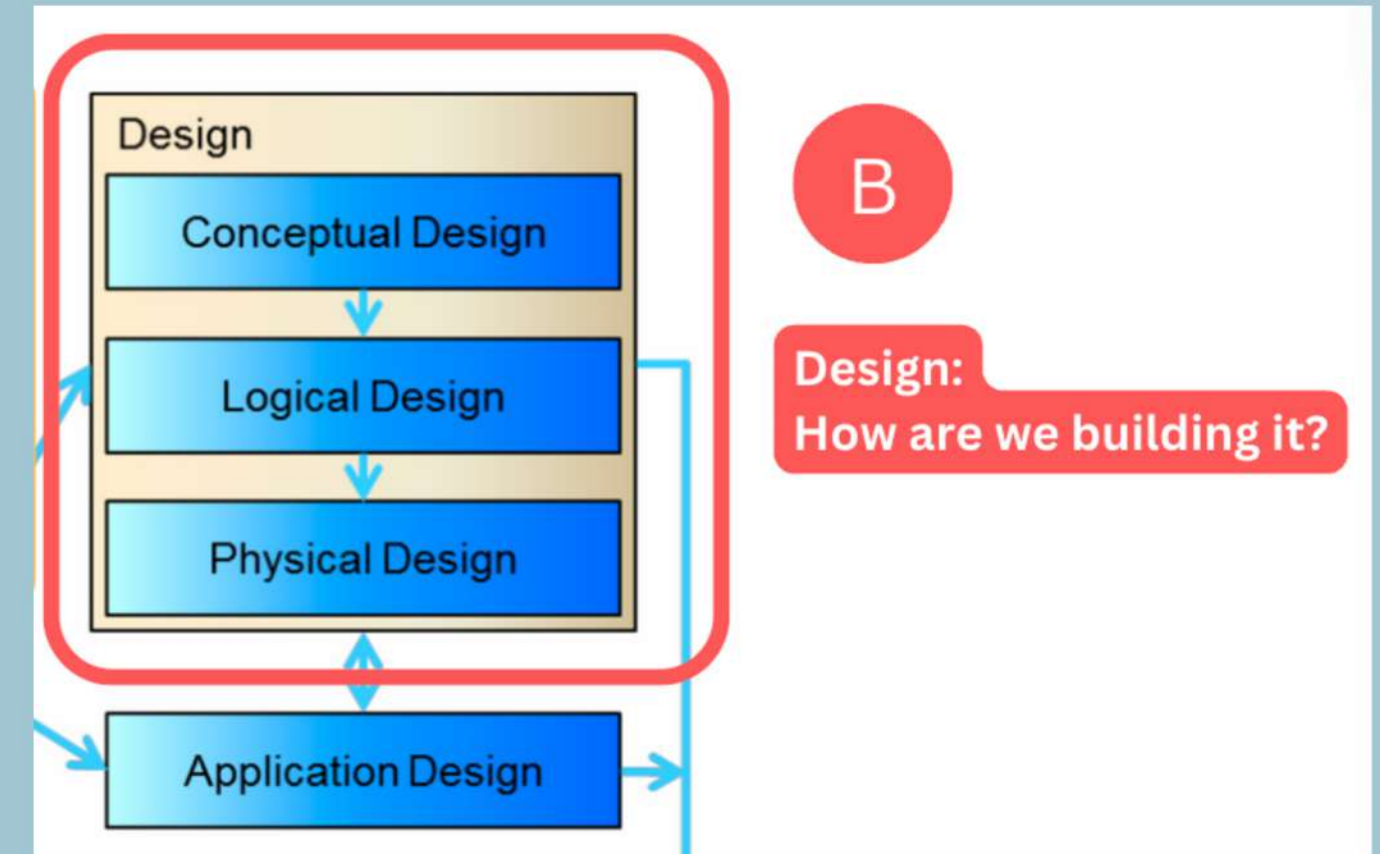

11

Maintenance

# Q1(b)

Describe the tasks that are performed in the **conceptual design** stage to generate a conceptual model

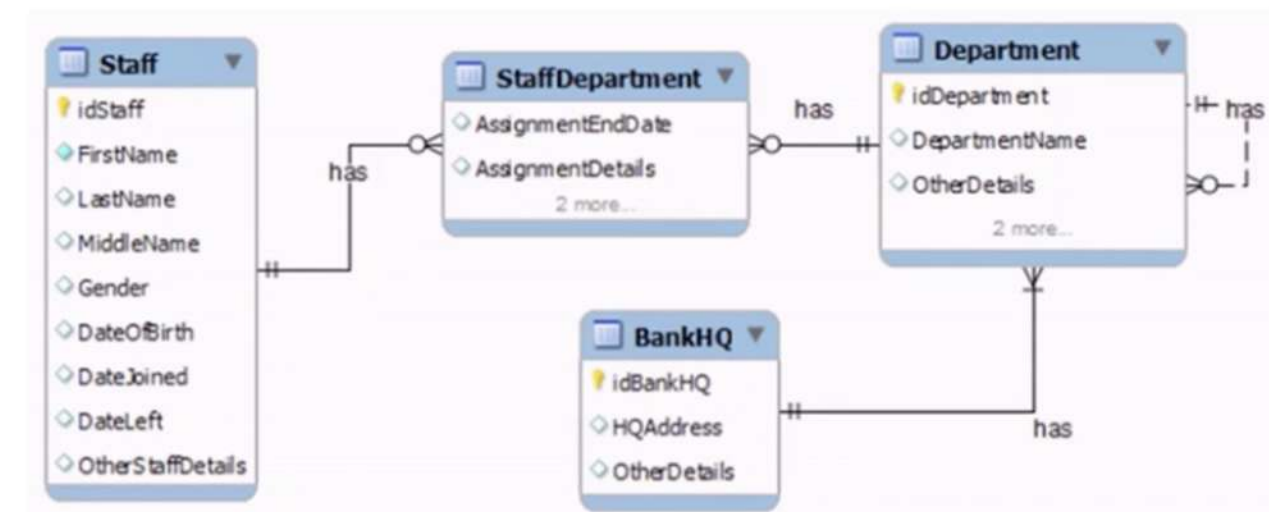

## 4. Conceptual Design

- Purpose: Construct **general idea** of how to model the data
  - **NO** physical / DB model / DBMS considerations

- Need to do:
  - Identify entities, attributes, relationships
  - **ER** diagrams

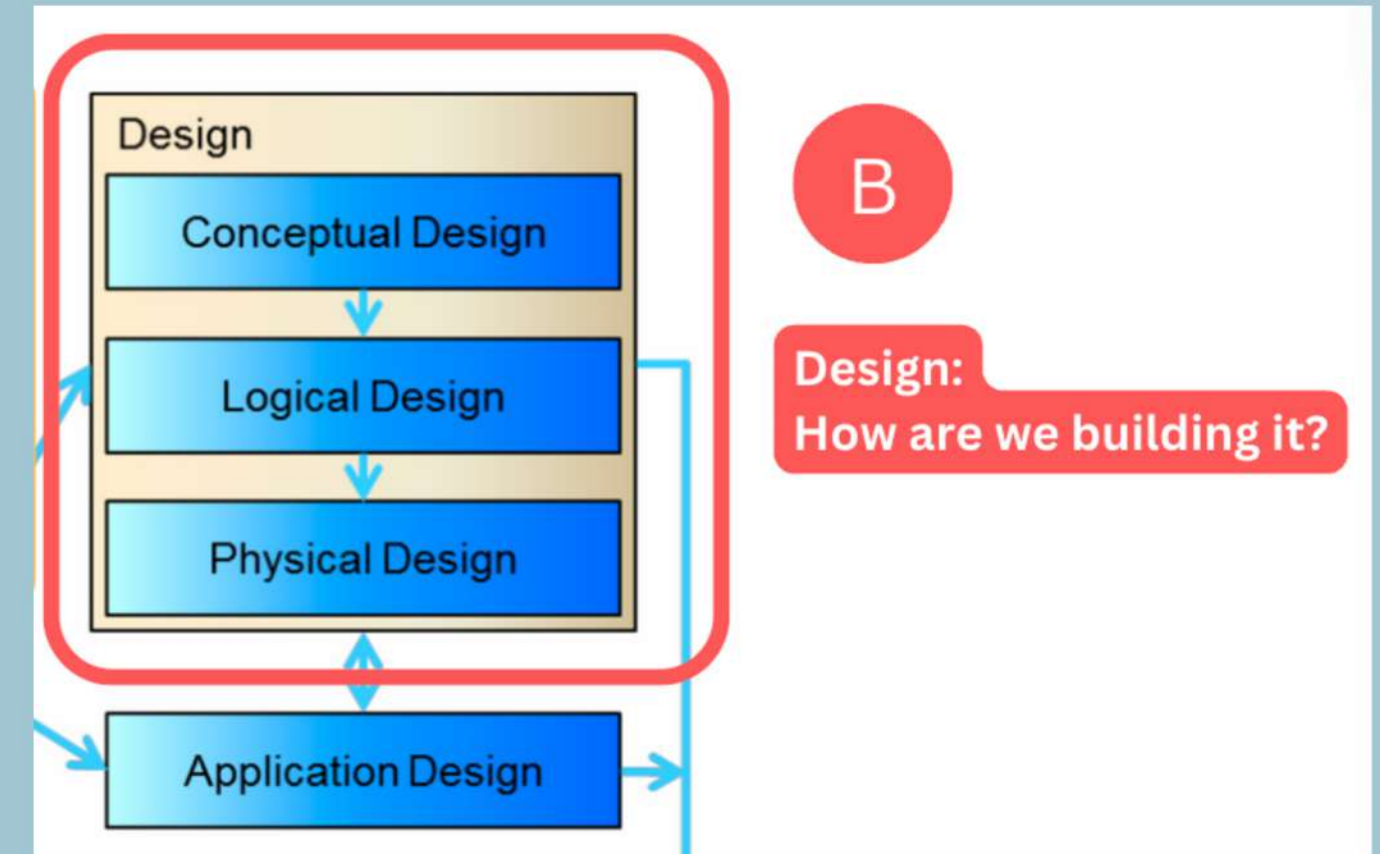

# Q1(b)

- Evaluate the requirement analysis
- Identify:
  - ***Entities, relationships*** (and their ***attributes***)
  - ***Constraints***
- Organise into ***ER model***

# Q1(c)

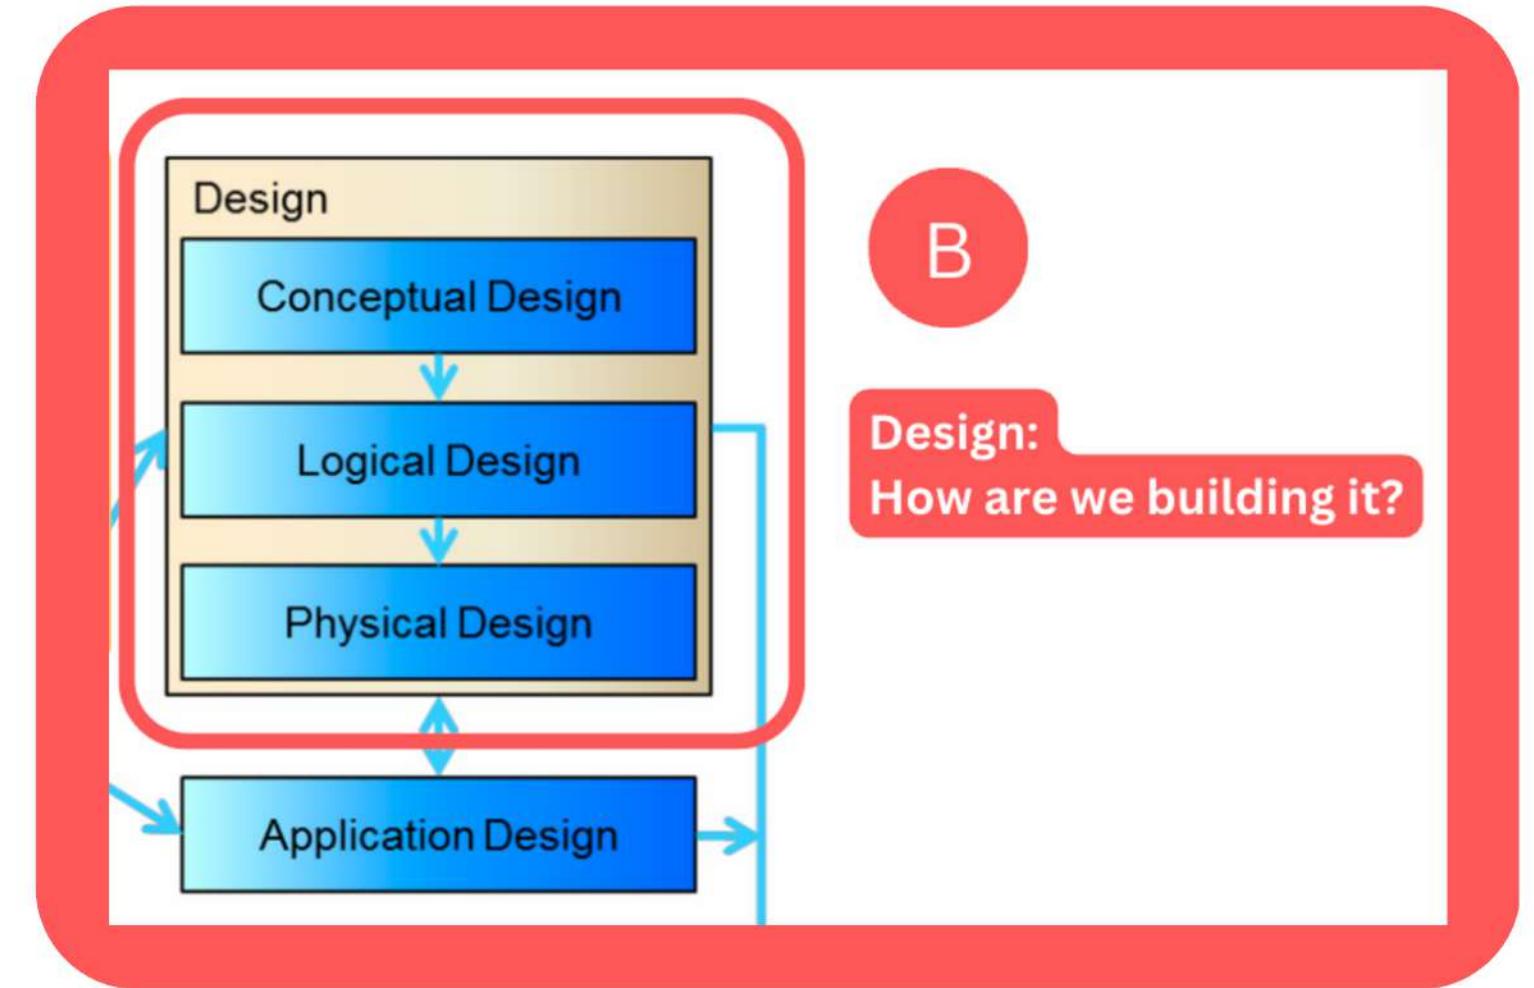

How do you refine a **conceptual** model to convert it to a **logical** model (relational)?

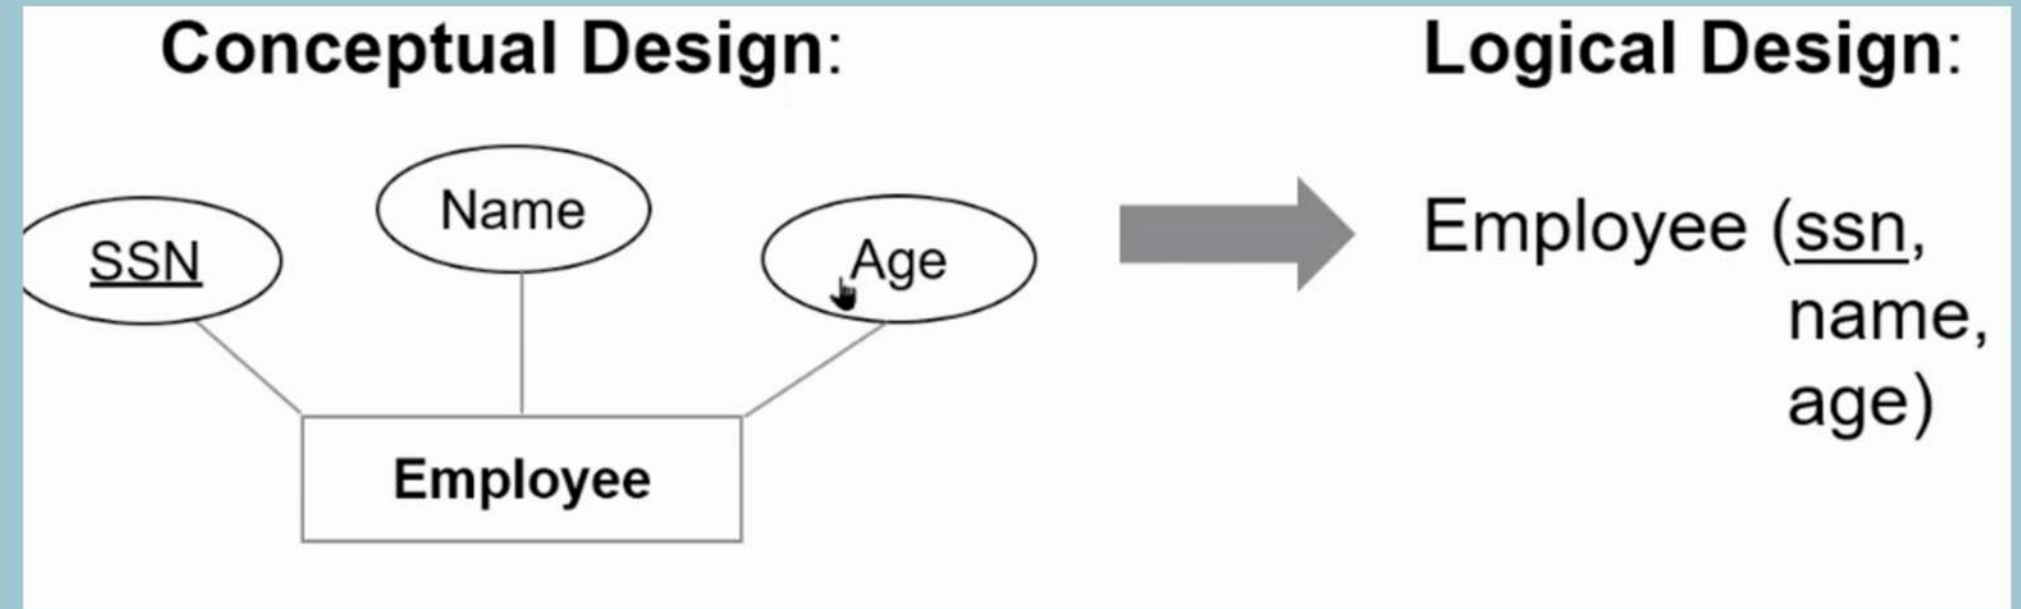

## 5. Logical Design

- Purpose: Decide on DB model
  - **NOT** database format / DBMS
- Need to do:
  - + FK, PFK
  - **Relational** model

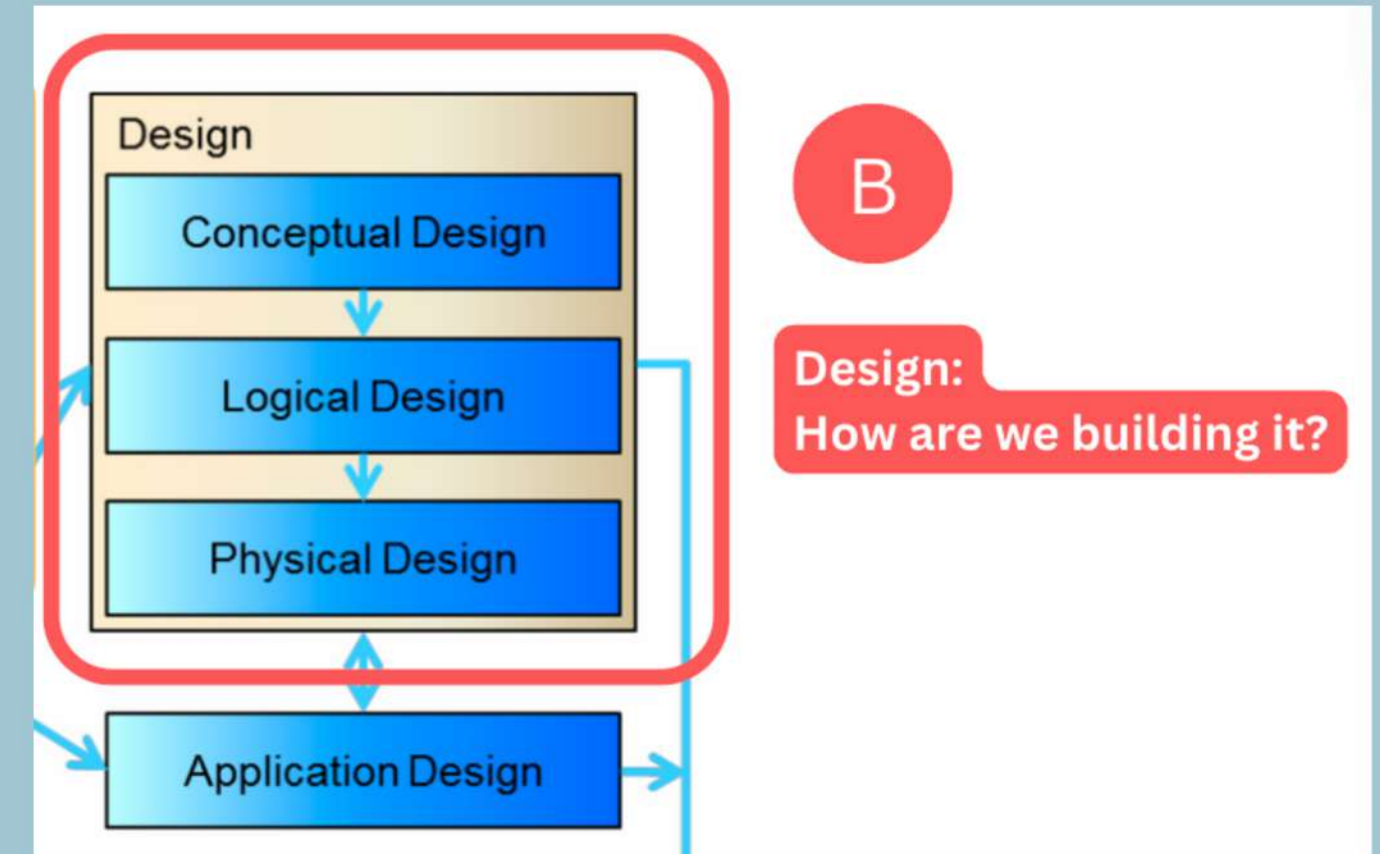

## Q1(c)

- Flatten conceptual entities to **relations**
  - Resolve *multi-valued / composite* attributes
  - Resolve relationships (many-to-many...)
- Entity name → CamelCase
- Attribute name → lower case

# Q1(c)

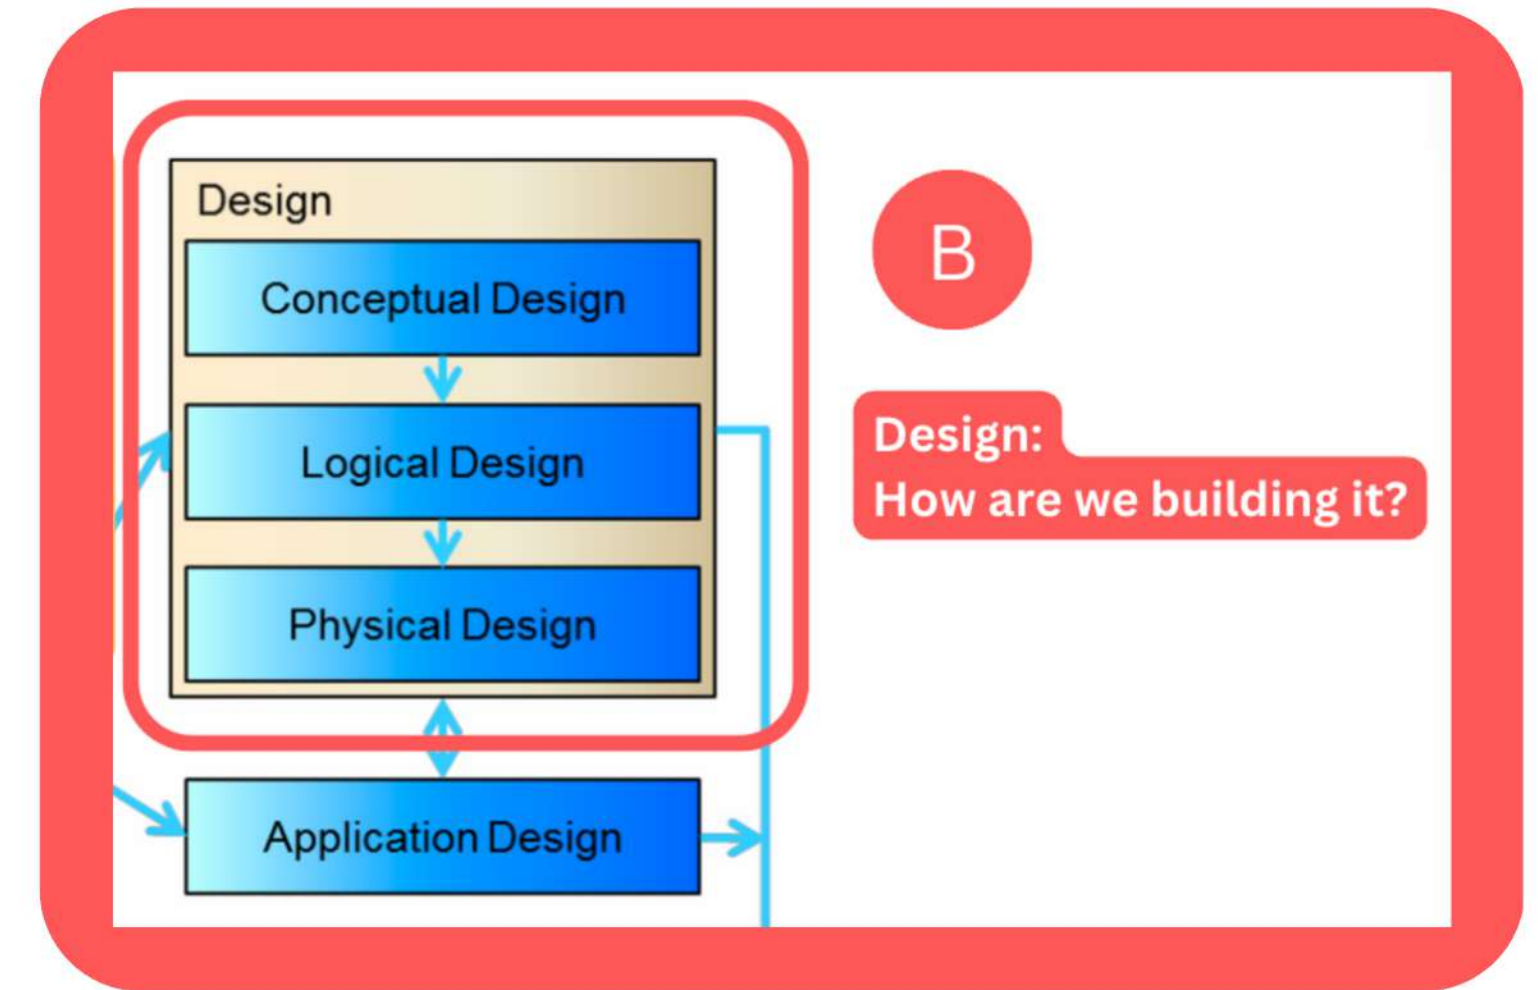

What must be done to transform a **logical** model to a **physical** model (Relational)?

## 6. Physical Design

- Purpose: Decide DBMS
- Need to do:
  - + Data types
  - (file organisation, indexing...)

# Q1(c)

- + Data types
- Add constraints (null, non-null...)

# Q2 - Case Study

# Terms

## Entities

“**Object**” w/ important associated info. describing it

## Business rules

A business’ **constraint** on its data

## Attributes

Information that **describes** an entity

For the following case study, identify:

1. Entities
2. Business rules
3. For any 3 entities, list the attributes

A cinema chain operates a number of cinemas. Each cinema has several screens, numbered starting from 1. The chain keeps track of the size (in feet) and seating capacity of every screen, as well as whether the screen offers the Gold Class experience.

The cinema chain owns hundreds of movie projectors – both film projectors (16 mm and 35 mm) and digital projectors (2D and 3D). The chain stores key information about each projector, namely its serial number, model number, resolution and hours of use. Each movie screen has space for a single projector; technicians must be able to identify which screen each projector is currently projecting onto.

A wide range of movies are shown at these cinemas. The system should keep track of the last time a movie was shown on a particular screen. The marketing department needs to know the movie's title and year of release, along with the movie's rating (G, PG, M, MA15+ or R18+).

Each cinema has a numeric ID, name and address. For cinemas that are not owned outright, the business also keeps track of yearly rent. The system needs to be able to generate weekly activity reports for the chain's chief operating officer.

# Q2(a): Entities

A cinema chain operates a number of **cinemas**. Each cinema has several **screens**, numbered starting from 1. The chain keeps track of the size (in feet) and seating capacity of every screen, as well as whether the screen offers the Gold Class experience.

The cinema chain owns hundreds of movie **projectors** – both film projectors (16 mm and 35 mm) and digital projectors (2D and 3D). The chain stores key information about each projector, namely its serial number, model number, resolution and hours of use. Each movie screen has space for a single projector; technicians must be able to identify which screen each projector is currently projecting onto.

A wide range of **movies** are shown at these cinemas. The system should keep track of the last time a movie was shown on a particular screen. The marketing department needs to know the movie's title and year of release, along with the movie's rating (G, PG, M, MA15+ or R18+).

Each cinema has a numeric ID, name and address. For cinemas that are not owned outright, the business also keeps track of yearly rent. The system needs to be able to generate weekly activity reports for the chain's chief operating officer.

# Q2(a): Entities

- Cinema
- Screen
- Projector
- Movie

**Why is “cinema chain” not an entity?**

# Q2(b): Business Rules

A cinema chain operates a number of cinemas. Each cinema has several screens, numbered starting from 1. The chain keeps track of the size (in feet) and seating capacity of every screen, as well as whether the screen offers the Gold Class experience.

The cinema chain owns hundreds of movie projectors – both film projectors (16 mm and 35 mm) and digital projectors (2D and 3D). The chain stores key information about each projector, namely its serial number, model number, resolution and hours of use. Each movie screen has space for a single projector; technicians must be able to identify which screen each projector is currently projecting onto.

A wide range of movies are shown at these cinemas. The system should keep track of the last time a movie was shown on a particular screen. The marketing department needs to know the movie's title and year of release, along with the movie's rating (G, PG, M, MA15+ or R18+).

Each cinema has a numeric ID, name and address. For cinemas that are not owned outright, the business also keeps track of yearly rent. The system needs to be able to generate weekly activity reports for the chain's chief operating officer.

# Q2(b): Business Rules

- Each cinema has several screens, numbered starting from 1
- Each movie screen has space for a single projector
- Technicians must be able to identify which screen each projector is currently projecting onto.
- The system should keep track of the last time a movie was shown on a particular screen

# Q2(c): Attributes

A cinema chain operates a number of **cinemas**. Each cinema has several **screens**, **numbered starting from 1**. The chain keeps track of the **size** (in feet) and **seating capacity** of every screen, as well as whether the screen offers the **Gold Class experience**.

The cinema chain owns hundreds of movie **projectors** – both **film projectors (16 mm and 35 mm)** and **digital projectors (2D and 3D)**. The chain stores key information about each projector, namely its **serial number**, **model number**, **resolution** and **hours of use**. Each movie screen has space for a single projector; technicians must be able to identify which screen each projector is currently projecting onto.

A wide range of **movies** are shown at these cinemas. The system should keep track of the last time a movie was shown on a particular screen. The marketing department needs to know the movie's **title** and **year of release**, along with the movie's **rating** (G, PG, M, MA15+ or R18+).

Each cinema has a **numeric ID**, **name** and **address**. For cinemas that are not owned outright, the business also keeps track of **yearly rent**. The system needs to be able to generate weekly activity reports for the chain's chief operating officer.

# Q2(c): Attributes

- **Cinema** (ID, name, address, yearlyRent)
- **Screen** (number, size, seatingCapacity, goldClass)
- **Projector** (format [16 mm film/35 mm film/2D digital/3D digital], serialNumber, modelNumber, resolution, hoursUsed)
- **Movie** (title, yearReleased, rating)
